COURSE INTRODUCTION (COURSE 1, BLOCK 1)

COURSE INTRODUCTION

This is the course in Education for the First Semester of Two Years Master Degree level. The course consists of two blocks. From this course you will be able to learn that Philosophy and Education go hand in hand. All educational practice is grounded in an educational philosophy, theoretical approach, or stance. This course mainly comprises of three broad aspects of Philosophy– The Basic of Philosophy, Schools of Philosophy and the Educational Philosophy of many great philosophers all over the world. Study of this course will help the learners to acquaint with all these broad aspects of philosophy. In a nutshell, this course will provide a perspective to the importance of education and serves as a stimulus for learners to pursue education as a career.

BLOCK INTRODUCTION

This is the first block of the course. It comprises of total eight units. In this block, the First Unit deals with the meaning and concept of Philosophy and its relation with Science and Education. The Second Unit explains the entire philosophy of Vedic Education which includes Samkhya, Nyaya and Vedanta Philosophy. The Third Unit tries to reflect on the Philosophy of Buddhism and Jainism and its educational principles. The Fourth Unit deals with the Islamic Philosophy and its Educational Implication of Islamic Thought. From Fifth to Eighth Unit all the units basically deal with all the Schools of Philosophy. The Fifth Unit discuss Idealism as a School of Philosophy and its relevance in Education. The Sixth Unit deals with another school of philosophy i.e., Naturalism. Here an attempt has been made to give a clear picture of Naturalism as a school of philosophy and its relevance in the emerging Society. The Seventh and Eight Unit deals with another two important schools of philosophy— Pragmatism and Existentialism and its educational implications.

While going through this block, you will come across some along-side boxes, which are put on the left side or right side of the text. These boxes will explain you meaning of some words and concepts within the text. Apart from this, there will be some broad and short questions which have been included under ‘ACTIVITY’ and ‘CHECK YOUR PROGRESS’ in every unit. Activities will increase your thinking capacity because questions put in Activity are not directly derived from text. Hints on the answers to the short questions have been put under section ‘ANSWERS TO CHECK YOUR PROGRESS’. Besides, a few text-related questions have been put in ‘POSSIBLE QUESTIONS’. These questions will help to draw your attention on the probable topics for the examination so that you can prepare for the examination with confidence.
## CONTENTS

### UNIT 1: Philosophy and Education  
Meaning of Philosophy, Definitions of Philosophy, Characteristics of Philosophy, Nature of Philosophy, Scope of Philosophy, Branches of Philosophy, Relationship between Science and Philosophy, Difference between Science and Philosophy, Philosophy and Education, Meaning and Functions of Educational Philosophy, Influence of Philosophy in Education.  

### UNIT 2: Philosophy of Vedic Education  

### UNIT 3: Buddhism and Jainism Philosophy  

### UNIT 4: Islamic Philosophy  
Concept of Islamic Philosophy, Basic Tenets of Islamic Thought, Features of Islamic Thought, Basic Philosophy of Islamic Thought, Five Pillars of Islam, Salient Features of Islamic Education System, Educational Implication of Islamic Thought.
UNIT 5: **Idealism as a School of Philosophy**

Meaning of Idealism, Essence of Idealism, Educational Implications of Idealism with Special Reference to Metaphysics Epistemology and Axiology, Idealism and Aims of Education, Idealism and Curriculum, Idealism and Methods of Teaching, Idealism and Discipline, Idealism and Teacher, Relevance of Idealism in Education.

UNIT 6: **Naturalism as a School of Philosophy**

UNIT 7: **Pragmatism as a School of Philosophy**

Meaning of Pragmatism, Principles of Pragmatic Philosophy, Educational Implications of Pragmatism with Special Reference to Metaphysics, Epistemology and Axiology, Pragmatism and Aims of Education, Pragmatism and Curriculum, Pragmatism and Methods of Teaching, Pragmatism and Discipline, Pragmatism and Role of Teacher, Relevance of Pragmatism in Education in the Emerging Society.

UNIT 8: **Existentialism as a School of Philosophy**

Meaning of Existentialism, Assumptions of Existentialism, Principles of Existentialism, Educational Implications of Existentialism with Special Reference to Metaphysics, Epistemology and Axiology, Existentialism and Aims of Education, Existentialism and Curriculum, Existentialism and Methods of Teaching, Existentialism and Discipline, Existentialism and Role of the Teacher, Merits and Demerits of the Existentialism.
UNIT 1: PHILOSOPHY AND EDUCATION

UNIT STRUCTURE

1.1 Learning Objectives
1.2 Introduction
1.3 Meaning of Philosophy
   1.3.1 Definitions of Philosophy
   1.3.2 Characteristics of Philosophy
   1.3.3 Nature of Philosophy
   1.3.4 Scope of Philosophy
1.4 Branches of Philosophy
1.5 Relationship between Science and Philosophy
1.6 Difference between Science and Philosophy
1.7 Philosophy and Education
1.8 Meaning and Functions of Educational Philosophy
1.9 Influence of Philosophy in Education
1.10 Let Us Sum Up
1.11 Further Reading
1.12 Answers to Check Your Progress
1.13 Possible Questions

1.1 LEARNING OBJECTIVES

After going through this unit you will be able to–

- describe the meaning, concept, nature and scope of philosophy;
- identify the basic branches of philosophy;
- explain the relationship between philosophy and science, philosophy and education;
- define the term educational philosophy;
- identify the functions of educational philosophy; and
- explain the influence of philosophy on different aspects of education.
1.2 INTRODUCTION

Education can be thought of as the transmission of the values and accumulated knowledge of the society. As society grows more complex, the quantity of knowledge to be passed on from one generation to the next generation too increases. Similarly as society gradually attaches more and more importance to education, it also tries to formulate the overall objectives, content, organization and strategies of education. In short, there is development in philosophy and theories of education. This unit is a reflection on the basic concept of philosophy and its relation to education.

1.3 MEANING OF PHILOSOPHY

Philosophy is an academic discipline that exercises reason and logic in an attempt to understand reality and answer fundamental questions about knowledge, life, morality and human nature. Philosophy is a comprehensive system of ideas and it is at the root of all knowledge. It is a continuous seeking of insight into basic realities the physical world, mind, society, knowledge and values.

The word “philosophy” comes from the Greek word “philosophia”, which combines the words “philo” meaning “love of” and “sophia” meaning “wisdom”. It is commonly held that the word philosophy was first used by the Greek philosopher Pythagoras circa 500 B.C. The term was often contrasted with the word “Sophistry” which literally translates to “wise man”. The latter indicates one’s concern knowledge, while the former indicates a love of truth. Philosophy is the rational investigation of logic, ethics, and metaphysics. Philosophy is essentially a spirit or method of approaching experience rather than a body of conclusions.

Philosophy is a study that seeks to understand the mysteries of existence and reality. It tries to discourse the nature of truth and knowledge and to find what is of basic value and importance in life. It also examines the relationship between humanity and nature and between individual and society. Philosophy arises out of wonder, curiosity, and the desires to know and understand. Thus philosophy is a form of inquiry – a process of analysis, criticism, interpretation and speculation.
The word “philosophy” comes from the Greek word “philosophia”, which combines the words “philo” meaning “love of” and “Sophia” meaning “wisdom”.

Philosophy is a form of inquiry – a process of analysis, criticism, interpretation and speculation.

### 1.3.1 Definitions of Philosophy

Different scholars having their different ideologies, ways of life tend to have different types of philosophy. Philosophy also varies from individual to individual, from place to place, and time to time. Some of the well known definitions given by different scholars are as follows:

- **Aristotle**: “Philosophy is the science which investigates the nature of Being as it is in itself, and the attributes which belong to it in virtue of it our nature.”
- **Coleridge**: “Philosophy is the science of sciences.”
- **Fichte**: “Philosophy is the science of knowledge.”
- **Herbert Spencer**: “Philosophy is completely unified Knowledge – the generalization of philosophy comprehending and consolidating the widest generalizations of science.”
- **Plato**: Philosophy aims at the knowledge of the eternal, of the essential nature of the things.”
- **V. R. Taneja**: “Philosophy, being a mother discipline, all arts and sciences look to it for the solution of their problems.”
- **Radhakrishnan**: “Philosophy is the logical enquiry in to the nature of reality.”
- **Wundt**: “Philosophy is the unification of all knowledge obtained by the special sciences in a consistent while.”
- **Edgar S. Brightman**: “Philosophy is essentially a spirit or method of approaching experience rather than a body of conclusions about experience.”
The above definitions identify philosophy with completely unified scientific knowledge. Philosophy systematises, organises and unites the knowledge of sciences into a unified system. Philosophy studies the foundations of our beliefs and attempts to clear and justify them. Philosophy is concerned with intellectual, moral, aesthetic and religious spheres which satisfy our deepest aspirations.

### 1.3.2 Characteristics of Philosophy

Some of the significant characteristics of philosophy:

- Philosophy is a search for reality and truth.
- Philosophy is based on enquiry.
- Philosophy is a dynamic and living force.
- Philosophy is art as well as science.
- Philosophy is an intellectual pursuit.
- Philosophy is love of knowledge.
- Philosophy is love of wisdom.
- Philosophy is the art of thinking rationally and systematically of the reality as a whole.
- Philosophy is a rational attempt to integrate our knowledge and interpret and unify our experiences.

### 1.3.3 Nature of Philosophy

Philosophy is an attempt to arrive at a rational conception of the reality as a whole. It enquires into the nature of the universes in which we live, the nature of the human soul, and its destiny, and nature of God or the ‘Absolute’. It examines, clarifies and explains popular and scientific concepts of matter, space, time, causality, evolution, mechanism, life, mind or soul, God or the Absolute, right and wrong, good and evil, beauty and ugliness etc. Philosophy seeks to provide a complete account of man’s world. It is reflective and critical in nature. Philosophy is a rigorous, disciplined, guarded analysis of some of the most difficult problems of human life.
Philosophy is a critical method of approaching experience:
Philosophy is the study of the most fundamental questions that arise from reflecting on the nature of the world and the place human being occupy in it. The importance of studying philosophy lies in the habits of thought it inculcates. The study of philosophy offers one of the best opportunities to enhance one’s analytical, critical, expressive and interpretive abilities. It is, undoubtedly, the beginning of a process that can enrich one’s life immensely.

Philosophy is a comprehensive science: Philosophy is an activity of thought, a type of thinking. It is critical and comprehensive, in fact, the most critical and comprehensive manner of thinking which the human species has yet devised.
Philosophy as a critical and comprehensive process of thought involves resolving confusion unmasking assumptions, revealing pre-supposition, testing positions, looking for reasons, examining world –views and questioning conceptual frameworks. Joseph A. Leighton says that, “Philosophy like science consists of theories of insight, arrived at as a result of systematic reflection.” Philosophy analyses the popular and scientific concepts, examines their validity in the light of reason and interrelates them to one another.

Philosophy is the interpretation of life: Philosophy is the interpretation of life, its nature and meaning. It is an enquiry into its source and destiny. It enquires into nature, meaning, purpose, origin and destiny of human life. It tries to understand the universe in relation to man. It investigates the nature of the supreme norms, ideals or values of life. Now, philosophy is regarded more as an interpretation of human life, its sources, value, meaning, and destiny than as an enquiry in to the nature of the world, soul and God.

Philosophy is a search of truth and reality: Truth is the central subject in philosophy. Philosophy is a search for truth and reality. Philosophy helps us understand what is meant by truth, whether truth can be known, and the means by which something can be
said to be true. It helps us become more rational, ethical, appropriately open-minded and appropriately sceptical and it helps us attain justified beliefs that are more likely to be accurate than unjustified ones. Therefore, philosophy may be interpreted as an inquiry into the foundations of our beliefs, an attempt to clarify and justify them with reason.

- **Philosophy is an attempt to answer the ultimate questions of life**: Philosophy relates to the study of, and attempts to understand the root nature of reality, existence, and knowledge. It is an attempt to answer all the ultimate question of life. What is self? What is mind? What is ethics? What is the true nature of the universe? What are the qualities of truth, goodness and beauty? All these questions are interpreted by philosophy. Philosophy is deeper and more comprehensive. It tries to answer the ultimate questions of life. Thus philosophy is an attempt to think in most general and systematic way about everything in the universe, about reality as a whole.

- **Philosophy is speculative**: Philosophy is speculative in pursuing questions that do not bear directly on practical matters. It is speculative in considering problems which only highly abstract thoughts present. It is speculative in developing effective philosophical perspectives and concern. It is speculative in considering ultimate metaphysical issues, pursuing the most critical formulation of principles held to govern thought and action. This nature of philosophy tries to seek to establish meaning by resolving controversies. It also seeks to identify and to clarify the fundamental assumptions of conflicting points of view.

- **Philosophy as analysis**: Philosophy is concerned only with the problem and methods of knowledge. Philosophy is not the study of ultimate reality as a whole. Philosophy aims to consider the deeper questions about life and the world that we live in by thinking through the possibilities, the repercussions, the facts, and the experiences that people have in order to define
Philosophy as analysis focuses on logic and an evaluation of language to attempt to define questions, analyze definitions and determine what is true about the world.

- **Philosophy as synthesis:** The nature of philosophy is to synthesize man's total experience in the form of knowledge. Philosophy is an effort to combine all knowledge and all experiences, both individual and social. Kant puts forth that synthesis describes the central and foundational function of cognitive activity, namely the rule-bound combination of data received by the senses and considered by means of this process under a specific general aspect i.e a concept of the understanding.

  From the above discussion, it is apparent that philosophy is the conscious reflection upon the world as a whole. Philosophy investigates the ultimate nature of the supreme ends or values, like—Truth, Good, Beauty and the God, and their relation to Reality.

### CHECK YOUR PROGRESS

**Q.1:** State the meaning of Philosophy.

**Q.2:** Give a suitable definition of Philosophy.

### 1.3.4 Scope of Philosophy

Philosophy is a reasoned pursuit of fundamental truths, a quest for understanding, a study of principles of conduct. It seeks to establish standards of evidence, to provide rational methods of
resolving conflicts, and to create techniques for evaluating ideas and arguments. So there is no one subject matter of philosophy, but an indefinite jumble of subject-matters. Indeed, almost anything is or can be a subject–matter of philosophy when looked at from the latter’s peculiar point of view. The scope of philosophy includes the following areas of inquiry:

- A comprehensive explanation of why man occupies a particular position in the world.
- An explanation of the nature of knowledge and its relevance to human life.
- A study of theories and principles which guide social behaviour which we call “good” or “bad”, “right” or “wrong”.
- Dealing with God is a significant concern of philosophy. It tries to find out the possibility of the existence of God, nature of God, and the method of activities of God.
- The prime concern of philosophy is life. Nothing in the universe is beyond life and nothing in life is beyond philosophy. Moreover, philosophy is the criticism and interpretation of life. It enquires into the nature, meaning, purpose, origin and destiny of human life.
- Philosophy also deals with science. It tries to find out the origin of science, possibility of changing the methods of science. Because of its dealing with scientific method, everything of philosophy is methodically based on science.
- Philosophy being the way of knowledge of Truth, its method must be in agreement with the nature of truth. Philosophy tries to clarify life and basic values of life. Clarity of life and basic values of life is necessary if we want to live a worthy life.

**LET US KNOW**

- Philosophy is an attempt to answer all the ultimate questions of life. What is self? What is mind? What is ethics? What is the true nature of the universe? What are the qualities of truth, goodness and beauty?
Philosophy is regarded more as an interpretation of human life, its sources, value, meaning, and destiny than as an enquiry in to the nature of the World, Soul and God.

Philosophy explores all the major questions of human activity concerning art, morality, religion, science Thus, the scope of philosophy is very broad and it includes- knowledge, metaphysics, logic, ethics, aesthetics etc.

As the systematic study of ideas and issues, philosophy may examine concept and views drawn from science, art, religion, politics or any other realm. Philosophy explores all the major questions of human activity concerning art, morality, religion, science Thus, the scope of philosophy is very broad. Some of the fields of philosophy can be briefly sketched below–

- **Logic**: Logic is an important aspect of philosophy and logic involves explanations, arguments and their critical evaluation. It studies truth. It is the logic that gives an understanding of scientific method of enquiry through its inductive and deductive methods.

- **Ethics**: It takes up the meaning of moral concepts – such as right action, obligation and justice. It is also called moral philosophy.

- **Metaphysics**: It seeks basic criteria for determining what sorts of things are real.

- **Epistemology**: It examines the nature of knowledge, its pre-suppositions and foundations, and its extent and validity.

- **The History of Philosophy**: It studies all major philosophy such as the Ancient, Medieval, Modern, 19th century, 20th century etc.

- **Philosophy of Mind**: The philosophy of mind addresses not only the possible relations of the mental to the physical, but the many concepts having essential mental elements: belief, desire, emotion, feeling, sensation, passion, will etc.

- **Philosophy of Religion**: It is concerned with the relation between faith and reason, the nature of religious language, the
relation of religion and morality and the question of how a God who is wholly good could allow the existence of evil.

- **Philosophy of Science**: It clarifies both the quest for scientific knowledge and the results yielded by that quest.

- **Political Philosophy**: It concerns the justification and limits of governmental control of individuals, the meaning of equality before the law, the basis of economic freedom and many other problems concerning government.

- **Philosophy of Law**: It explores such topics as what law is, what kinds of laws there are, how law is or should be related to morality and what sorts of principles should govern punishment and criminal justice in general.

- **Philosophy of Art**: It concerns the nature of art, including both performing as well as painting, sculpture and literature.

- **Philosophy of Language**: This field has close ties to both epistemology and metaphysics. It deals with the nature of meaning, the relations between words and things, the various theories of language learning etc.

From the above discussion, it is clear that philosophy is the creator of all subjects. All branches of science and knowledge emerged from philosophy. Philosophy is that type of knowledge which has a close relation with almost all of the prevailing branches of knowledge. Philosophy is a vast field where all branches of knowledge are to be discussed. Philosophy harmonizes the highest conclusions of the different sciences, gives a rational conception of the whole world. To sum up, we can say that-

- Philosophy refers to knowledge concerned with discovery of truth.

- Philosophy refers to the acquisition of wisdom which influences the role of life.

- Philosophy is the study of the most general and abstract features of the world and categories with which we think.

- Philosophy is the general study of values, ethics, logical thinking and theoretical speculation about the nature of reality and reason.
Philosophy is the activity of presenting, interpreting and clarifying ideas and human problems in the light of wisdom.

Philosophy is an academic research which is concerned with solving the problems of universe and mankind.

1.4 BRANCHES OF PHILOSOPHY

Philosophy is the mother of all subjects. All branches of science and knowledge have emerged from philosophy. Philosophy is an activity of thought. Philosophy is the systematic study of ideas and issues, a reasoned pursuit of fundamental truths, a quest for a comprehensive understanding of the world, a study of principles of conduct, and much more.

The various branches of philosophy are:

- **Epistemology**: Philosophy is the search for knowledge and this search is critical. The first problem which arises before philosophy is about the nature of knowledge and limitations of the area of knowledge. Therefore epistemology is the most fundamental of philosophy. It is the study of knowledge. Epistemology is the explanation of how we think. It is that branches of philosophy which studies the origin or sources, types, structure, methods and validity of knowledge. It is needed in order to use and obtain knowledge of the world around us. It addresses questions like—What can I know? How do we get knowledge? What does it mean to know (truth)? What is the nature of truth? How does a man know what is real?

  Thus epistemology encompasses the nature of concepts, the constructing of concepts, the validity of the senses, logical reasoning, as well as thoughts, ideas, memories, emotions, and all things mental. It analyses the nature of knowledge and how it relates to similar notions such as truth, belief and justification. It is essentially about issues having to do with creation and dissemination of knowledge in particular areas of inquiry.

- **Metaphysics**: Metaphysics is the branch of philosophy concerned with the nature of existence, being and the world. Aristotle calls it “first philosophy” (or sometimes just “wisdom”), and says it is the
subject that deals with “first causes and the principles of things”. Descartes’s, primary work on the subject of metaphysics is called “Meditations on First Philosophy.” Metaphysics is the foundation of a worldview. It encompasses everything that exists, as well as the nature of existence itself. It says whether the world is real, or merely an illusion. It is a fundamental view of the world around us.

Traditionally, the word Metaphysics comes to us from Ancient Greece, where it was a combination of two words – *Meta*, meaning over and beyond – and *physics*. Thus, the combination means over and beyond physics. In the definition found in most dictionaries, metaphysics is referred to as a branch of philosophy that deals with first cause and the nature of being. It is taught as a branch of philosophy in most academic universities under the label of “Speculative Philosophy.”

Aristotle originally split his Meta-physics into three main sections and these remain the main branches of metaphysics:

- **Ontology** (the study of being and existence, including the definition and classification of entities, physical or mental, the nature of their properties and the nature of change).
- **Natural Theology** (the study of God, including the nature of religion and the world, existence of the divine, questions about the creation, and the various other religions or spiritual issues).
- **Universal science** (the study of first principles of logic and reasoning, such as the law non-contradiction).

There are two kinds of metaphysics:

i) General metaphysics (universal) and

ii) Special metaphysics (Particular).

General metaphysics is the study of ultimate reality as in the big picture of reality and is done empirically by most contemporary philosophers. Items of study in general metaphysics are- categories, universals, attributes etc.

Special metaphysics has potentially an infinite number of sub-branches, each studying seriously one particular subject. Topics that
are taken seriously are philosophy of mind and psychology, personal identity, and aesthetics.

Metaphysics answers questions like what is the nature of reality of this universe? What is the source of this world? Is it something real or it just appears to be real? What reality lies beneath the origin, nature and destiny of man? Hence, all questions pertaining to the nature of reality come under the purview of metaphysics. In other words, metaphysics is the study of the most general aspects of reality, pertaining to subjects such as substance, identity, the nature of the world in which man lives.

**Ethics:** Ethics or moral philosophy is a branch of philosophy that involves systematizing, defending, and recommending of concepts of right and wrong conduct. It is concerned with questions of how people ought to act, and the search for a definition of right conduct and good life.

The word “ethics” is derived from the Greek “ethos”, meaning custom or character.

Ethics differ from morals and morality in the sense that ethics denotes the theory of right action and the greater good, while morals indicate their practice. Ethics is not limited to specific acts and defined moral codes, but encompasses the whole of moral ideals and behaviours, a person’s philosophy of life. They affect how people make decisions and lead their life. Ethics covers the following dilemmas:

- How to live a good life.
- Our right and responsibilities.
- The language of right and wrong.
- Moral decisions– what is good and bad.

There are three areas of ethical theories: Meta ethics, normative ethics and applied ethics.

- Meta ethics deals with the nature of moral judgement.
- Normative ethics is concerned with the content of moral judgements and the criteria for what is right or wrong.
- Applied ethics looks at controversial topics like war, animal rights and capital punishments.
Thus ethical beliefs shape the way we live - what we do, what we make and the world we create and explore through our choices. Aristotle called “a life well-lived.”

- **Logic:** Logic is the study of reasoning—the nature of good (correct) reasoning and of bad (incorrect) reasoning. Logic is the attempt to codify the rules of rational thought. It enquires into various kinds of proof or evidence and the conditions of their validity. It investigates the nature and validity of various kinds of inference, deduction and induction.

  The term “logic” is derived from the Greek word “logos”, which has a variety of meaning like word, thought, idea, argument, account, reason or principle. Logic is the study of reasoning, or the study of the principles and criteria of valid inference and demonstration. Aristotle defined logic as “New and necessary reasoning”. “New” means it allows us to learn what we do not know, and “Necessary” means its conclusion is inescapable. Logic asks questions like “what is correct reasoning? “What distinguishes a good argument from a bad one? “How can we detect a fallacy in reasoning?”

  Basically, there are two kinds of logic:

  i) Deductive Logic and
  ii) Inductive Logic.

  Deductive Logic is concerned with determining when an argument is valid (i.e. deals with conclusive inferences).

  Inductive Logic is concerned with the correctness of inferences for which the evidence is not conclusive (i.e. probable inferences).

  As a branch of philosophy, logic is broken down into many subsets: for instance, modal logic, many-valued logic, modern logic, symbolic logic, formal and informal logic, deductive and inductive logic.

- **Aesthetics:** Aesthetics is the branch of philosophy concerned with the nature of art, including both performing arts and painting sculpture and literature. It has also been defined as “critical reflection on art, culture and nature” The word “aesthetics “is derived from the Greek “aisthetikos” meaning “of sense perception”. Aesthetics ask questions like, -“What is a work of art? “What makes a work of art successful?
Why do we find certain things beautiful? “Is there a connection between art and morality?” “Can aesthetic judgement be improved or trained?” “What is beauty?” “What is ugliness?” etc.

Aesthetics is sometimes considered to be of a larger philosophy category called Axiology. Axiology is an area of philosophy that studies values and value judgements.

The above mentioned branches are the main branches and divisions of philosophy. There is a hierarchical relationship between these branches. These branches of philosophy do not however, exist in isolation. These branches originate from basic questions ‘What do I know?’ ‘How do I know it?’ ‘Where do we come from?’ ‘What is good?’ ‘What is beautiful?’ etc.

The above discussion highlighted that–

- Epistemology deals with our concept of knowledge, how we learn and what we can know.
- Metaphysics deals with the fundamental questions of reality.
- Ethics is concerned with human values and how individuals should act.
- Logic studies the rules of valid reasoning and argumentation.
- Aesthetics deals with notion of beauty and the philosophy of art.

Summarising the above, we can say that philosophy is the study of general and fundamental problems, such as those connected with existence, knowledge, values, reason, mind and language. Philosophy is distinguished from other ways of addressing such problems by its critical, generally systematic approach and its reliance on rational argument.

1.5 RELATIONSHIP BETWEEN SCIENCE AND PHILOSOPHY

Before analysing the relationship between science and Philosophy, it is essential to know the meaning of science. Literally the word “Science” is derived from a Latin word “Scientia” meaning knowledge. When we use the word “Science”, it also refers to scientific knowledge, scientific methods and different branches like physical science, biological science and social science.
Science is generally defined as “a systematic body of knowledge relating to a definite department of nature.

**Nature of Science:** Some of the distinguishing nature of science can be stated as below:

1) Science is based on observations and experiments.
2) Scientific knowledge is objective knowledge.
3) Causation is an important concept in science.
4) Science is based on reason.
5) Science is a systematic study of knowledge.
6) Science yields quantitative results.
7) Scientific knowledge is claimed to be exact and certain.
8) Its methods are generally accepted as analytic.

On the other hand, philosophy tries to study and understand the fundamental nature of two things: the existence of man and the relationship between man and existence. Philosophy is based on reason. Its methods are logical argumentation. Philosophy uses arguments of principles as basis for its explanation. Philosophy entertains both subjective and objective types of questions. Philosophy is mostly involved with thinking and to create knowledge.

The relation between science and philosophy is mutual and characterised by their ever deepening connection. All the outstanding theoreticians have themselves been guided by philosophical thought and critically analysing all the principles and systems known to science, discovering their contradictions and overcoming them by means of new concepts. The connection between science and philosophy has endured for thousands of years. Philosophy and science are interconnected, particularly in the work of Galileo, Descartes, Kepler, Newton, Einstein among others. Philosophical training gives the scientist breadth and penetration, a wider scope in posing and resolving problems. Philosophy is comprehensive **synthetic** science. It is concerned with everything as a universal science. Like science, philosophy consists of theories of insights arrived as a result of systematic reflection.

Science is organized common experience whereas philosophy is organized scientific knowledge. Both science and philosophy deal with the
world of our experience, and are based on the facts of our common experience. Science deals with sections of the world, while philosophy deals with the whole world. If science is a step beyond common experience, philosophy is a step beyond science. Science organizes the particular truths of our common experience, while philosophy organizes the general truth of science. Philosophy harmonizes the highest truth of science and reduces them to a system. Philosophy without foundation in science is dogmatic. Philosophical statements are based on sets of facts studied by the sciences. Philosophy, like sciences seek certain, exact and organized knowledge. It reflects upon the world as a whole, and the moral, aesthetic, and religious experiences of mankind, and seeks to arrive at a rational conception of the reality as a whole. Thus the relationship between science and philosophy can be stated in the following ways:

1) Both, Science and philosophy are engaged in the search of truth.
2) Philosophy examines scientific method.
3) Both philosophy and science are critical in nature.
4) Philosophy integrates science and examines scientific assumption.
5) Scientific research influences philosophical progress.
6) Philosophy guides future course of scientific process.
7) Philosophy provides a constructive criticism of sciences.
8) Philosophy creates knowledge by thinking. On the other hand, science does the same thing by observing.
9) Philosophy entertains both, subjective and objective type of questions. It raises questions and processes before finding out the answers. Science tries to explain the answers from experimental results. So both the studies try to explain situations and find answers.
10) Philosophy provides a constructive criticism of sciences.

From the above discussion, we can say that both philosophy and science grew out of the reflective thinking and are promoted by an impartial love of truth. Both attempt at understanding the world. Prof. John Dewey said that the roots of philosophy and science are the same. But their approaches are different. Science has its goals-description, prediction, experimentation and control while philosophy aims at interpretation, in finding
the purpose and value in life. Philosophy works by using reason-based logical analysis. Science is different because it makes use of hypothesis testing that is empirically based. This difference in process enables both to work independently. Bertrand Russell said that the difference between philosophy and science is of the degree, not of kind. Though philosophy is opposed to science in some respects, they are inter-dependent on each other in certain aspects. Philosophy without science is inadequate. Sciences, too, are incomplete without philosophy. Philosophy examines the popular and scientific concepts, and systematizes and organizes them. It is the integration of scientific knowledge.

1.6 DIFFERENCES BETWEEN PHILOSOPHY AND SCIENCE

The major difference between philosophy and science can be stated as below:

1) Philosophy is best linked to the human heart, while science is to the human mind.

2) Philosophy uses questioning and a series of analyses through logical arguments and dialectics. But science is more concerned with empirical evidences and testable hypotheses.

3) Science bases its explanation from experimentation and observation on while philosophy bases its explanation on an argument of principles.

4) Philosophy and science are engaged in different activities and differ in their method, scope, problem, conclusion etc.

Though there are some differences between philosophy and science, they are both equal partners assisting creativity in its exploration to attain generalising truth. Science is also a defined study, in contrast to philosophy which can be applied to many and extensive areas of discipline. Coleridge defines philosophy as, “the science of sciences”.
ACTIVITY 1.1
Do you think Philosophy and Education is really inter-related? If yes, justify it with your own words with the help of an example.

1.7 PHILOSOPHY AND EDUCATION

A sound philosophy of life results into a sound philosophy of education. Philosophy is the foundation out of which come the objectives of education and education tries to achieve those objectives and acquaints philosophy with new problems to solve. Various scholars have presented their views regarding the type of relationship between philosophy and education. A few definitions are given below:

- **Herbert Spencer** opines “Education has no time to make holidays till all the philosophical questions are one for all cleared up.”
- **Adams** has rightly said, “Education is the dynamic side of philosophy. It is the active aspect of philosophical belief.”
- **James Ross** “Education is the dynamic side of philosophy.”
- **Fichte** “The art of education will never attain complete clearness without philosophy.”
- **John Dewey** “Philosophy is the theory of education in its most general phases.”
- According to **Connor**, “Theory (Philosophy) directs practice (Education) and practice directs theory.”
- According to **Gentile**, “Education without philosophy would mean a failure to understand the precise nature of education.”

The above mentioned definitions make it clear that philosophy and education are closely inter-related. If education is a set of technique for imparting knowledge, skills and attitudes, philosophy resume as vital foundation to all these. Philosophy is theory and education is practice. When we define education as the modification of behaviour, the direction in which modification is to be carried out is determined by philosophy. It is philosophy...
that provides the purpose of the aim and it is education which makes it practical. Education is a laboratory where philosophical theories and speculations are tested and made concrete. Education may, therefore be rightly called applied philosophy.

All the problems of education are solved by the guidelines of philosophy. Again, philosophy is wisdom and education transmits that wisdom from one generation to the other. Philosophy gives ideas, value and principles and these ideals, values, principle are followed by education. Philosophy and Education are two flowers of one stem, the two sides of one coin. One can never be thought of without the other. The presence of one is incomplete without the other.

The relationship between philosophy and education can be summed up as follows:

- Philosophy determines what constitutes a life worth living. The main task of education is to make life worth living.
- Philosophy tells us the goal and essential of good life. Education tells us the means to achieve those goals and learn those essentials of good life.
- Philosophy is the theory, education is the practice.
- Philosophy is the contemplative side and education is the active side.
- Philosophy deals with ends, education with the means and techniques of achieving those ends.
- Philosophy deals with abstract, education deals with the concrete.
- Philosophy is always in the background for shaping things in education.
- Philosophy answers thousands of questions pertaining to the whole field of education.
- Philosophy sets ultimate values on the basis of which aims of education are determined.
- The truth and principles established by philosophy are applied in the conduct of education process.
- Philosophy is in reality the theory of education and education is the application of the fundamental principles of philosophy.
1.8 MEANING AND FUNCTION OF EDUCATIONAL PHILOSOPHY

Educational philosophy is the application of philosophy in the field of education. It is the practical application of philosophical assumptions to the various aspects of education. It is the branch of general philosophy which attempts to answer educational questions such as aims, values, curriculum, method, discipline etc. It intends to comprehend education in its totality through the philosophical approach. It comprises of the principles, ideals, values and theories of life of particular people, at a particular time, in a particular society or country and it puts them in to practice in the field of education.

The main function of educational philosophy is to identify and explain the true nature of man, as the principal object of education. The functions of philosophy are generally associated with aims of education, the programme of education, examination and evaluation of educational organization, methods, contents, measurement and so on. The functions of philosophy can be mentioned as follows:

A) Determining the aspect of education:
   i) **Aims of education**: Educational philosophy guides the process of education by suggesting suitable aims from the diversities of life and selecting the means accordingly.
   ii) **Curriculum**: Educational philosophy helps curriculum designer to construct curriculum according to the need ability and interest of the child.
   iii) **Discipline**: Education philosophy also determines the nature and form of discipline.
   iv) **Teacher and student**: It is the educational philosophy which determines the role and quality of teacher as well as the student in diversified society. With the help of educational philosophy we get knowledge pertaining to the role of the teacher as well as student in the school and relationship with each other.
   v) **Administration**: The Knowledge of what kind of school administration should adopt is determined by educational
philosophy. It helps to establish a school in democratic or totalitarian system.

B) **Harmonizing old and new traditions in the field of education:**
In the process of social development, the old traditions are replaced by the new traditions. But this process of replacement is faced with lots of opposition from certain orthodox sections of the society. Therefore, there is the need of coordinating the two in order to maintain the harmony between them. This function can be performed by educational philosophy.

C) **Preparing the young generation to face the challenges of the modern time:** our present society is not static. It changes its value, tradition, custom, culture etc from time to time. One more addition to this list may be that “present age is an age of Globalization” and therefore, educational philosophy helps the individual to understand the relationship between the goals and complexities of society so that the young generation can develop critical attitude towards life in diverse society.

According to Brubacher, the different functions of educational philosophy are as follows:

a) **Speculative function:** One important function of philosophy of education is to speculate. That way, it leads the educator and the educational administrator from common sense approach to rational and perspective approach. When facts, data, information etc have been collected, education makes assessment of everything. Thus, it guides the teacher by giving him an overall view of the whole thing.

b) **Normative function:** The word “Normative” comes from the word “Norm”. Philosophy sets the norms, goals, principles, standards etc. By applying these norms, we are able to decide a thing so that it reaches the right decisions. In the absence of these norms, the teacher or the administrator or the controlling authorities fail to make the right decisions.
c) **Critical function:** Dealing critically with different aspects of education is another important function of educational philosophy. That way, it examines the contents, the methodology in the sphere of education and refines it, modifies it to make it fully suitable.

John Dewey says, “Education is the laboratory in which philosophical distinction became concrete and tested.”

### 1.9 INFLUENCE OF PHILOSOPHY ON DIFFERENT ASPECTS OF EDUCATION

Education aims at imparting knowledge. Knowledge, however, requires a global outlook and a synthesis of various types of information and experiences. This is a philosophical activity without which no education
is possible. Therefore, the need of philosophical basis of education is rooted in the branch of philosophy known as epistemology. Aristotle has said, “Whether we philosophise or not, we must philosophise.”

There are five general aspects of education i.e. aims of education, curriculum, methods of education, discipline and teacher. The impact of philosophy has been felt in all those aspects.

**a) Philosophy and aims of education:** The aims and objective of education are decided and determined by the society according to the philosophy of a particular time. Thus aims of education in different countries are determined by the philosophy of the time. So the aims and ideals of education vary with different philosophers. For example, in India the aim of education in Ancient, Muslim and English period is different from each other. The education in Athens aimed at cultural development of each individual of that era. Education system in America is influenced by materialism and is science-dominated. The democratic states, on the other hand aim at development of the individual. Idealistic system of education aims at spiritual development, pragmatic system of education aims at development of social efficiency and naturalism aims at natural development of the child. In this way, all the educational programmes are greatly influenced by different aims of education advocated from time to time. Philosophy formulates what it conceives to be the end of life and education offers suggestions how this end is to be achieved. Philosophy acquaints us with values in life and education tells us how these values can be realised. The aims of education are related to- the aim of life and the aim of life is always dependent on the philosophy that the individual has at a particular time. Thus, we cannot do without a philosophical foundation of education.

**b) Philosophy and curriculum:** It is Philosophy which also decides what subjects and activities are to be included in the curriculum for realising a particular aim of education. So far as physical development is concerned, physical activities like games, sports and exercise should be included in the curriculum. For development
of morality and spirituality, good literature, philosophy, ethics should be included. Similarly in order to infuse culture and inculcate humanitarian values, fine arts, drawing, painting, music, drama, social service should form an integral part of education. Moreover, curriculum should also consist of subjects like productive work, craft, diverse vocations knowledge of future life situations etc.

c) **Philosophy and methods of education:** There is a close relationship between philosophy and methodology of teaching. Different schools of philosophy have laid down their own methods of teaching. The naturalists focused on the child-centred method of education where maximum freedom is given to the child for learning. The idealists recommended discussion method, rote learning and a cordial atmosphere. The pragmatists advocate project and problem solving methods of teaching in which the pupils are engaged in a useful activity of their own choice and interest. Rousseau, Froebel, Montessori had also their individual methods of education according to their own philosophy.

d) **Philosophy and Discipline:** Different philosophy differs in their concept of discipline. In ancient India, emphasis was laid on a strict type of discipline. In medieval ages also, a very harsh and strict type of discipline was advocated and practised. Idealists are in favour of strict self-discipline and impressionistic discipline. The Naturalists believe in emancipationist discipline and pragmatists maintain a balance between the licence and control i.e. democratic discipline.

e) **Philosophy and Teacher:** Teacher is the main pivot in educational process. Teacher’s philosophy of life impresses his students. Idealists, advocate that teacher should be a friend, philosopher and guide. The naturalists insist that the teacher should never interfere with the free activities of the child. In naturalism, teacher is the “Director.” Pragmatists have made the teacher a sympathetic guide and provider of opportunity. It could therefore be said that philosophy has a great influence on the teacher both in the area of thinking and behaviour. Really speaking, a teacher is not teacher alone. In other
words a teacher himself has a philosophy of his own and he influences children accordingly. As such his philosophy of life should be such which develops the individuality of children to the fullest extent. For this, the teacher should know the needs of children and the demands of society and then plan his methods of teaching. He must keep in mind that his own beliefs, ideology and principal of behaviour have a powerful impact on the development of children. Hence, he must possess a good understanding of all the philosophies of life and choose good and wholesome elements.

Thus, it is clear that philosophy, life and education are intimately related with each other. Philosophy and education are also closely related. Rusk has rightly said that “from every angle comes a demand for a philosophical basis of education. There is no escape from philosophy of life and philosophy of education. Further, a sound philosophy of life results into a sound philosophy of education.

1.10 LET US SUM UP

- Philosophy is a comprehensive system of ideas and it is at the root of all knowledge. It is a continuous seeking of insight into basic realities the physical world, mind, society, knowledge and values.

- Philosophy also varies from individual to individual, from place to place, and from time to time.

- Philosophy seeks to provide a complete account of man’s world. It is reflective and critical in nature. Philosophy is a rigorous, disciplined, guarded analysis of some of the most difficult problems of human life.

- The scope of philosophy, as commonly understood, ranges from God to the electrons and from Meta-mathematics down to gymnastics and advertisements. Philosophy is a reasoned pursuit of fundamental truths, a quest for understanding, a study of principles of conduct.
Epistemology encompasses the nature of concepts, the constructing of concepts, the validity of the senses, logical reasoning, as well as thoughts, ideas, memories, emotions, and all things mental. It analyses the nature of knowledge and how it relates to similar notions such as truth, belief and justification.

Metaphysics answers questions like what is the nature of reality of this universe? What is the source of this world? Is it something real or it just appears to be real? What reality lies beneath the origin, nature and destiny of man?

Ethics is not limited to specific acts and defined moral codes, but encompasses the whole of moral ideals and behaviours, a person’s philosophy of life. They affect how people make decisions and lead their life.

The term “logic” is derived from the Greek word “logic”, which has a variety of meaning like word, thought, idea, argument, account, reason or principle. Logic is the study of reasoning, or the study of the principles and criteria of valid inference and demonstration.

Aesthetics is sometimes considered to be of a larger philosophy category called Axiology. Axiology is an area of philosophy that studies values and value judgements.

The relation between science and philosophy is mutual and characterised by their ever deepening connection. All the outstanding theoreticians have themselves been guided by philosophical thought, critically analysing all the principles and systems known to science, discovering their contradictions and overcoming them by means of new concepts. The connection between science and philosophy has endured for thousands of years. Philosophy and science are interconnected, particularly in the work of Galileo, Descartes, Kepler, Newton, Einstein among others.

A sound philosophy of life results into a sound philosophy of education. Philosophy is the foundation out of which comes the objectives of education and education tries to achieve those objectives and acquaints philosophy with new problems to solve.

1.12 ANSWERS TO CHECK YOUR PROGRESS

Ans. to Q. No. 1: Philosophy is a study that seeks to understand the mysteries of existence and reality. It tries to discourse the nature of truth and knowledge and to find what is of basic value and importance in life.
Ans. to Q. No. 2:  

a) Plato: Philosophy aims at the knowledge of the eternal, of the essential nature of the things."

b) V. R. Taneja: “Philosophy, being a mother discipline, all arts and sciences look to it for the solution of their problems.”

Ans. to Q. No. 3: The various branches of philosophy are: Epistemology, Metaphysics, Ethics, Logic and Aesthetic.

Ans. to Q. No. 4: Epistemology is the study of knowledge. It is that branch of philosophy which studies the origin or sources, types, structure, methods and validity of knowledge.

Ans. to Q. No. 5: The word metaphysics is derived from the Greek “meta ta physika” (after the things of nature) referring to an idea, doctrine, or posited reality outside of human sense perception.

Ans. to Q. No. 6: Aristotle originally split his Meta-physics into three main sections and these remain the main branches of metaphysics:

- Ontology.
- Natural Theology.
- Universal science.

Ans. to Q. No. 7: Ethics differ from morals and morality in the sense that ethics denotes the theory of right action and the greater good, while morals indicate their practice. Ethics is not limited to specific acts and defined moral codes, but encompasses the whole of moral ideals and behaviours, a person’s philosophy of life.

Ans. to Q. No. 8: Logic is the study of reasoning– the nature of good (Correct) reasoning and of bad (incorrect) reasoning. Logic is the attempt to codify the rules of rational thought.

Ans. to Q. No. 9: Aesthetics is the branch of philosophy concerned with the nature of art, including both the performing arts and painting, sculpture and literature. It has also been defined as “critical reflection on art, culture and nature.”

Ans. to Q. No. 10: When we use the word “Science”, it also refers to scientific knowledge, scientific methods and different branches like physical science, biological science and social science. Science is generally
defined as “a systematic body of knowledge relating to a definite department of nature.”

Ans. to Q. No. 11: Three distinguishing nature of science can be stated as below:

1) Science is based on observations and experiments.
2) Scientific knowledge is objective knowledge.
3) Causation is an important concept in science.

Ans. to Q. No. 12: Definitions are given below:

Herbert opines “Education has no time to make holidays till all the philosophical questions are one for all cleared up.”

Adam has rightly said,” Education is the dynamic side of philosophy. It is the active aspect of philosophical belief.”

1.13 POSSIBLE QUESTIONS

A) Short Questions (Answer each question in about 150 words)

Q.1: Define the term “Philosophy.”
Q.2: What are the basic assertions underlying in philosophy?
Q.3: Enlist the characteristics of Philosophy.
Q.4: Interpret philosophy as “Speculative” and “Analysis.”
Q.5: State the subject-matter of Philosophy.
Q.6: What are the main branches of philosophy?
Q.7: “Science and Philosophy continuously affect each others.” Give your own views.
Q.8: Differentiate between Science and Philosophy.
Q.9: Enumerate the functions of Educational Philosophy.

B) Long Questions (Answer each question in about 300-500 words)

Q.1: Define Philosophy and discuss its characteristics.
Q.2: Explain the nature of philosophy in detail.
Q.3: Write the concept of philosophy. Describe the scope of philosophy.
Q.4: Explain in detail the different branches of philosophy.
Q.5: “There is a hierarchical relationship between the branches of philosophy.” Discuss.
Q.6: “All questions of Education are ultimately the questions of Philosophy.” Discuss by giving examples.

Q.7: “Philosophy and Education are the two sides of the same coin.” In the light of above statement give the relationship between Philosophy and Education.

Q.8: Discuss the relation between philosophy and education.

Q.9: Discuss the influence of philosophy on different aspects of education.

2.1 LEARNING OBJECTIVES

After studying this unit, you will be able to–

- classify Indian schools of philosophy;
- explain the philosophy of Samkhya, its basic doctrines with their educational implications;
- explain the philosophy of Nyaya, its basic doctrines with their educational implications; and
2.2 INTRODUCTION

The different schools of Indian philosophy are classified into two main categories: (i) Astika, the orthodox or theistic schools and (ii) Nastika, the unorthodox or atheistic schools.

The Astika schools refer mainly to six systems of philosophy; they are Nyaya, Vaisheshika, Yoga, Samkhya, Purva Mimamsa and Vedanta. Each school has a set of sutras or aphorisms (maxims) that form its basis and explains the essential philosophy of the school. Though the first four of these schools accept the authority of the Veda, they are based on the wisdom of individual Rishis or sages for their philosophical principles. The last two schools, i.e. Purva Mimamsa and Vedanta, are based on the statements of the Vedas.

Nastika or the unorthodox schools include Buddhism, Jainism, and Carvaka philosophies that do not accept the authority of the Vedas. For the believers, the Vedas originated from God. Therefore in the Indian tradition, any school of thought which does not accept the authority of the Vedas is considered atheistic or Nastika, even if it includes belief in God or gods.

2.3 MEANING AND CONCEPT OF SAMKHYA PHILOSOPHY

Samkhya is one of the oldest schools of Indian philosophy. A distinguished Indian sage named Kapila was the founder of the Samkhya philosophy. The first work of the Samkhya philosophy was the ‘Sankhya-Sutra’ written by Kapila. But this work was very brief, and hence Kapila wrote another detailed work entitled the ‘Sankhya-Pravanchana-sutra’. However these works were lost in the course of time. Later in the 3rd century CE, philosopher Ishvarakrishna wrote the Samkhya-karikas or the “Stanzas of Samkhya” which is the earliest available and authoritative source of Samkhya philosophy. Thus, the classical form and expression of Samkhya was received from the Samkhya-karikas of Ishvarakrishna. Vijnanabhikshu also wrote an important treatise on Samkhya philosophy in the 16th century.
Samkhya philosophy combines the basic doctrines of Samkhya and Yoga. Samkhya represents the theory and Yoga represents the application or the practical aspects.

Samkhya is a Sanskrit word which means ‘number’. This school of philosophy might have got this name since it specifies the number and nature of the ultimate constituents of the universe and thereby imparts knowledge of reality. The term Samkhya also means perfect knowledge (samyak khyayate). This philosophy stresses *jnana* or knowledge as the only means of liberation. Hence it is a system of perfect knowledge.

According to Samkhya philosophy, all the realities in our experience involve two fundamental and eternal substances: the Prakriti (also called pradhana and avyakta); the Purusha (the being, the conscious self or the soul). The basic argument behind this conclusion is called ‘Satkaryavada,’ the principle that the effect (= karya) pre-existed (= sat) in the cause (= karana), before manifestation. For example, a clay pot always exists in the clay even before the pot is made, though in a potential form. The logic behind this is that something can never be produced out of nothing. Applying this argument to the world of our experience Samkhya philosophy concludes that there must be some (the three gunas: sattva, rajas, tamas) subtle substances from which the universe evolves.

### 2.3.1 Samkhya and the theory of reality or existence (Metaphysics)

Sankhya philosophy believes that the Universe consists of two realities: *Prakṛti*, i.e. matter and *Purusha*, i.e. spirit or consciousness. Thus Samkhya is a philosophy of dualistic realism. *Prakṛti* is singular, and *Purushas* are numerous. Both are eternal and independent of each other. Creation results from a conjunction of *Prakṛti* and *Purushas*. *Prakṛti* consists of three *gunas* or qualities: *sattva*, *rajas* and *tamas*. The word *sattva* is derived from ‘sat’, representing light, goodness and intelligence which are real or existent. It is the quality by which a thing manifests itself to consciousness. Its function is to produce pleasure. *Rajas* represent...
the principle of change, energy and passion and it is the source of all activity. It leads to great enjoyment and restless effort. It produces pain. Tamas represents inactivity, dullness, heaviness and despair. Tamas is the obstacle to the manifestation of sattva. It resists activity and produces a state of ignorance and apathy.

Prakṛti is the primordial and ultimate cause which underlies the existence of all physical or worldly objects. This implies that the three gunas which constitute Prakṛti also constitute all objects of the physical world. Prakṛti is uncaused and eternal. This material cause of the world or Prakṛti is dynamic and it is never static. Even before evolution, the gunas are constantly changing and balancing each other. This is why Prakṛti and all the physical objects are also in a state of constant change. Although the gunas are always changing, a balance is maintained among three gunas in Prakṛti. The changes in the gunas and in the Prakṛti may be Homogeneous or Heterogeneous. Homogeneous changes do not disturb the equilibrium in the Prakṛti. And hence, worldly objects are not produced out of such changes. Heterogeneous changes result from revolutionary interaction among the three gunas which disturb the equilibrium. Such disequilibrium prompts Prakṛti to differentiate into world-objects which is the beginning of evolution. This process of evolution is initiated by the rajas, which activates sattva and then the two gunas overpower the inertia of the tamas. In the process of evolution, Prakṛti is transformed and differentiated into multiple worldly objects. Evolution is followed by dissolution. In dissolution, the worldly objects that evolve from Prakṛti mingle back into Prakṛti, and become integral and inseparable part of the undifferentiated, primordial substance. Thus the cycles of evolution and dissolution follow each other. This cosmic process of evolution and dissolution is twofold in nature—evolution is creative and dissolution is destructive. This cycle does not have either a beginning or an end. This is eternal and cyclic.

The dualistic philosophy of Samkhya advocates that Prakṛti and Purusha are entirely different from each other and have opposite
characteristics. *Purusha* according to Samkhya is pure consciousness. *Purusha* is the Supreme spirit or *atma*; the absolute as well as the self-conscious I; it is the disinterested spectator of the evolution of *Prakṛti*; the knower is *Purusha* and the known is *Prakṛti*.

*Prakṛti* is composed of sattva, rajas and tamas, while *Purusha* is free of them. *Prakṛti* is the object of knowledge, while *Purusha* is knower. *Prakṛti* is unconscious whereas *Purusha* is conscious. *Prakṛti* is not produced but it produces. On the contrary, *Purusha* is neither produced nor does it produce. It is absolute, independent, free, imperceptible or un-knowable, uncaused, eternal, immutable and above any experience and beyond any words or explanation. It is beyond time, space and causality. It remains pure, “non-attributive consciousness”.

*Prakṛti* is unintelligible and gets greatly influenced by the *Purusha*, and can only manifest itself as the various objects of experience of the *Purusha*. Although *Prakṛti* is unconscious, it is purposeful and it acts for the purpose of the individual *Purushas*. Besides constituting the physical universe, *Prakṛti* constitutes the gross body (made up of the five gross elements: ether or *akasa* (sky), air, fire, water and earth) and “sign-body” (the transmigrating entity, called *linga* or *linga-sarira* often called the subtle body) of a *Purusha*. The latter has the epistemological tools such as the mind, intellect, and senses. After the gross body is dead, the sign body of a *Purusha* transmigrates, i.e. it is reborn into another gross body. The cycle of transmigration is believed to be determined by the law of cause and effect, known also as the law of *karma*. So long as the transmigrating entity persists sufferings is unavoidable. Escape from sufferings is possible only by leaving the cycle of transmigration (sansara) forever. This is possible only through the realization of the fundamental difference between *Prakṛti* and *Purushas*, whereby an individual *Purusha* loses interest in Prakṛti and is thereby liberated forever from all bodies, subtle and gross which is known as *kaivalya* (isolation) in Samkhya philosophy.
2.3.2 Samkhya and the 25 tattvas

According to Samkhya, 24 tattvas or realities emerge or evolve out of Prakṛti. In conjunction with Purusha or the individual soul, the number becomes 25. These 25 tattvas are listed below:

- **Purusha**, the absolute Knower which is eternal, without a cause, and irreversible. (1)
- **Prakṛti**, the primordial and ultimate cause which underlies all existence of the physical world (1)
- **Mahat**, is the first great reality to emerge from Prakṛti. It has a universal aspect as the source of the world, and a physical aspect as intelligence or buddhi in the living beings. (1)
- **Ahamkara** or the mutative ego or 1-sense (1)
- **Manas** or physical mind or brain where thoughts and determinations originate, (1)
- The five panchendriyas or sense organs: the auditory sense (Karna), the thermal sense (Tvak), the visual sense (chaksu), the gustatory sense (Jihva) and the olfactory sense (Nasa) (5)
- The five karmendriyas, or the organs of action: viz. vocal organ (Vak), manual organ (Pani), organ of locomotion (Pada), excremental organ (Payu) and genital organ (Upastha) (5)
- The five tanmatras, or subtle elements, viz. smell (Gandha), taste (Rasa), light (Rupa), thermal (Sparsa) and sound (Sabda) (5)
- The five Mahabhutas or gross elements namely Akasa (sky or ether), Vayu (air), Tejas (fire), Ap (water) and Prithvi (earth) (5)

These 25 tattvas are the evolutes of Prakṛti. The Mahat is the first reality. From Buddhi, ahamkara or the feeling of individuality or ego evolves. Up to this, the tattvas are subtle, but from here on gross. From ego evolve the brain (manas), the five senses (jnanendriyas), the five organs of action (karmendriyas), the five subtle essences (tanmatras) or objects of the senses, and the five gross elements (mahabhutas). Mahat, ahamkara, and the five tanmatras are both causes and effects. The rest are effects only.
2.3.3 Samkhya and the theory of knowledge
(Epistemology)

According to Sankhya philosophy there are only three valid sources of knowledge (pramanas). They are direct perception i.e pratyaksha, inference i.e anumana and testimony i.e. sabda. Pratyaksha is direct knowledge of an object gained through sense organ. According to Samkhya, perceptions are two of types: Indeterminate perceptions (nirvikalpa pratyaksha) and determinate perceptions (savikalpa pratyaksha). Indeterminate perceptions are like pure sensations. They are crude impressions or vague awareness about an object and they do not reveal definitive knowledge about the object. Determinate perceptions are real perceptions with meaning about objects of perception. Sensations, after being processed, categorized and interpreted properly, become determinate perceptions.

Anumana or inference is the second source of knowledge. Inference is drawing conclusions or making judgments on the basis of circumstantial evidence and prior conclusions rather than on the basis of direct perception. For example, sight of smoke helps one to infer that fire is underneath even when one does not see it directly.

Sabda or testimony (aptavakya) is the third and the last source of knowledge. Though aptavakya literally means reliable speech, in Samkhya it refers to the testimony of the Sruti or the Vedas. The Vedas give true knowledge about the super-sensuous realities, which cannot otherwise be known, by pratyaksa or anumāna. The Vedas are apauruceya (not man-made but divine) and infallible. They represent the intuitions of the great Rishis, or the enlightened sages.

2.4 EDUCATIONAL IMPLICATIONS OF SAMKHYA PHILOSOPHY

Samkhya philosophy has great significance for present-day education. Education in modern times is taken to mean the process of developing the
potentialities that lie within the individual which is supported by Samkhya philosophy. Samkhya’s psychological views that knowledge leads to the modification of buddhi also reflect modern learning theories that explain education as the modification of behaviour.

- **Samkhya Philosophy and the Meaning of Education:** As Samkhya philosophy believes that an action (Karya) is already inherent in a cause, modern educational theories also believe that the development of man is already inherent in him. Education is the process of unfolding the potentialities of man to its fullest development. According to Samkhya philosophy true education is that which help one to differentiate Prakṛti from Purusha (matter and spirit).

- **Samkhya Philosophy and the Aims of Education:** Modern education draws close to Samkhya philosophy when it emphasizes the aim of realizing the best self of the individual that lies within him and thus leading him towards perfection. According to Samkhya, the supreme aim of life as well as of education is the attainment of perfection of Purusha through discrimination, leading to kaivalya or salvation. This salvation may be attained by realizing the distinction between the Prakṛti and Purusha (matter and spirit). Therefore, education according to Samkhya should aim at developing man in such ways that he may distinguish between matter and spirit, and may attain freedom from the miseries of life. This is the basic end (Saddhya) of education.

- **Samkhya Philosophy and the Curriculum:** Sankhya philosophy attaches importance on developing of both physical and spiritual aspects. Hence, the curriculum must consist of knowledge and actions of matter as well as of the soul. In line with the views of Sankhya on the developmental process, curriculum should be different for different age group children. Accordingly, maximum attention should be given on the development sense organs during childhood. According to Samkhya, development of conscience (mind, ego and intelligence) also proceeds along the development of the sense organs. Hence, along with sense training, language, literature, social science, material
science and mathematics also should be included in the curriculum to develop mind, ego and intelligence of the child. According to Samkhya, Ahamkara (ego) seems to become stable, intelligence and power of decision develops during adolescence and hence subjects like geometry, logic etc. should be included in the curriculum for this age group of students. By the time children become youths, they should be taught theology, philosophy, logic, physiology, ayurveda among others. Yoga forms an important part of curriculum since it is the only way to understand original form of soul and to experience it according to Samkhya.

In brief, the curriculum according to Samkhya should include the study of all disciplines, with special emphasis on the natural sciences so that learners may understand Prakṛti and be capable of discriminating between Purusha and Prakṛti. Moreover, the arts find important place in the curriculum so as to develop an appreciation and understanding of the works of authorities. Physical activities and exercises including yoga also form important part of the curriculum since Samkhya believes only a healthy and focused individual can attain salvation.

- **Samkhya Philosophy and the Methods of Education**: Samkhya divides the instruments for receiving knowledge into two categories, external and internal instruments. External instruments are the sense organs and the organs of work. Internal organs refer to Manas (mind), Ahamkara (ego), Mahat (intelligence) and Purusha (soul). According to Samkhya, conjunction of Prakṛti and Purusha is necessary for acquiring knowledge. According to Samkhya, there are three sources of knowledge: Pratyaksha (Direct), Anumana (Inference) and Sabda (Testimony). Here Sabda (aptavakya) means the statements of Veda. Based on these sources, there are three methods of acquiring knowledge: direct perception or observation, inference or the deductive method, and the method of studying the authoritative statements.

  Therefore, the methods prescribed by Samkhya include: thorough study of authorities, use of mind and reason to validate the theories,
experiential learning with maximum involvement of the senses, activity based learning including projects, practical work besides direct observation and logical reasoning.

- **Samkhya Philosophy and the Discipline:** Samkhya philosophy recommends strict control or discipline of body and mind. However, discipline according to Samkhya should be internal and self-imposed rather than external or imposed by the authority. Like Yoga, Samkhya philosophy also recommends strict control of mind, words and deeds. In order to enforce such control they recommend following five vows, viz: Truth, Non-violence, Anti-theft, No storage of things and Celibacy. Moreover, they prescribe five rules to follow, viz: Sanitation, Satisfaction, Tenacity, Self study, Worship. Sankhya believes that without following discipline, humans cannot make his body healthy; and mind, ego and intelligence neat and hence cannot gain the true knowledge.

- **Samkhya Philosophy and the Role of Teacher:** Samkhya philosophy views the teacher as an authority, an Aapta human being. The teacher must be an expert in the subject he teaches. He must realize difference between Prakṛti and Purusha. The teacher must have clear knowledge about the sources of knowledge. The teacher should be a facilitator or helper of the learner in the process of development of the innate potentiality of the learner. Sankhya also wants the teacher to be a man of discipline.

### 2.5 MEANING AND CONCEPT OF NYAYA PHILOSOPHY

Nyāya is one of the six orthodox (astika) schools of Indian philosophy. The founder of this school of philosophy was sage Aksāpada Gautama. Nyāya is a Sanskrit term which means “rules”, “method” or “judgment”. Nyāya is predominantly based on reasoning and logic and is primarily concerned with the conditions of correct knowledge and the means of receiving that knowledge. Therefore, Nyaya is variously known in Indian philosophy such as: *Hetu-vidya* (science of causes), *Anviksiki* (science of critical inquiry), *Pramana-sastra* (epistemology or the science of correct knowledge), *Tarka-
**sastra** (science of reasoning, innovation, synthesis), **Vadartha** (science of discussion) and **Phakkika-sastra** (science of uncovering sophism, fraud, or error).

Nyaya philosophy is a form of direct realism which states that anything that actually exists is knowable by human beings. According to Nyaya, correct knowledge and understanding is distinct from simple, reflexive cognition; it requires **Anuvyavasaya** (cross-examination or reflective cognition of what one thinks one knows). The period during which Nyaya School was developed is uncertain. The Nyayasutras composed by Gautama, which is a foundational text for Nyaya philosophy, is estimated variously to have been composed between 6th-century BC and 2nd-century CE. The Nyayasutras which discusses logic, methodology and epistemology was later refined, expanded and applied to spiritual questions by Nyaya scholars that followed. Nyaya philosophy’s major contribution to Indian schools of philosophical thought was its systematic development of the theory of logic and its treatises on epistemology.

### 2.5.1 Nyaya Philosophy and the Theory of Knowledge (Epistemology)

Nyaya philosophy is basically treated as a theory of knowledge, and its scholars developed many treaties on epistemology called **Pramana-sastras**. **Pramana**, in Sanskrit stands for “means of knowledge”. It refers to the reliable and valid means of gaining true knowledge. Nyaya recognized four valid means (**pramana**) of acquiring valid knowledge: perception (**pratyaksha**), inference (**anumāna**), analogy or comparison (**upamāna**) and word or testimony of reliable sources (**śabda**). Besides these means, Nyaya philosophy established a theory to identify errors and the process by which errors are made in acquiring knowledge. These include **Samaśya** (problems, inconsistencies, doubts) and **Viparyaya** (contrariness, errors) which can be corrected or resolved by a systematic process of **Tarka** (reasoning).
Pratyaksha or perception is the primary means of knowledge. Perception can be of two types, laukika (ordinary) and alaukika (extraordinary). According to Gautama Ordinary perception is a ‘non-erroneous cognition which is produced by the intercourse of sense-organs with the objects’. Extraordinary perception include: yogic perception, induction from perceived specifics to a universal and perception of the current state an object induced from its previous state.

Anumāna is that knowledge which is deduced from prior perception. Knowledge acquired through anumāGa is based upon a well-known or observed concomitance (connection) between two things; one as the cause and the other as the effect. For example, the concomitance or concurrence between rain and clouds, smoke and fire etc. Anumāṇa or inference is of three types:

- **Pūrvavat anumāna** or a priori which involve deductive reasoning from a general principle to a necessary effect; (from cause to effect) for example, sight of clouds helps one to infer that rain is imminent;

- **Śesavat anumāna** or a posteriori, which involve reasoning from facts or particulars to general principles or from effects to causes; for example, sight of smoke leads one to infer that there has been fire; and

- **Samānyato drsta** which is knowledge of one thing derived from the perception of another thing with which it is commonly seen; for example, sight of rain helps one infer to that there are clouds.

Upamāna or Analogy is the knowledge of a thing derived from its similarity to another thing which is already known. Telling about Cat to give the knowledge about Tiger to children is an example of Upamāṇa or Analogy.

Śabda/Āgama/Āpta-Vākya or Testimony refers to the instructive assertion of a reliable person (āpta). These instructions may relate to perceptible things or about intangible realities. However, testimony can be of two types, Vaidika (Vedic), which are the words...
of the four sacred Vedas, and Laukika, or words and writings of trustworthy human beings.

## 2.5.2 Nyaya Philosophy and the Theory of Existence/Reality (Metaphysics)

Nyāya philosophy believes in pluralistic realism. According to Nyāya there are many independent realities which are broadly divided into two classes: being and non-being (bhāva and a-bhāva).

Being or positive realities, (bhāva) are of six kinds: substance or dravya, –quality or guGa, action or karma, generality or sāmānya, particularity or viśec –a and inherence or samavāya. Non-being (a-bhāva) represents all negative facts or all kinds of non-existence.

According to Nyāya, there are sixteen padārthas or categories, namely: pramāna, prameya or objects of knowledge, samśaya or doubt, prayojana or an end, drstānta or an example, siddhānta or a doctrine, avayava or members of the syllogism, tarka or an hypothetical argument, nirnaya or ascertainment, vāda or discussion, jalpa or wrangling, vitandā or cavilling, hetvābhāsa or fallacies of inference, chala or quibbling, jāti or futile objections, and nigraha-sthāna or the points of defeat in debate. These categories give the topics of philosophical discourse and the second padārtha, i.e. prameya includes all objects of knowledge and the categories of reality.

Dravya or substance is the substratum of qualities and actions, and the constitutive or material cause of composite things. There are nine substances, namely: prthivī or earth, jala or water, tejas or fire, vāyu or air, ākāśa or ether, kāla or time, diś or space, ātman or soul, and manas or mind. The atoms of earth, water, fire and air are eternal, while the compounds made of them are non-eternal. We cannot ordinarily perceive an atom. The existence of atoms is proved by inference.

Guna or quality is defined as that which exists in a substance and has no quality or activity in it. It is a non-constitutive cause of things.
It determines their nature and character, but not their existence. There are twenty-four kinds of quality. These are: colour (rūpa), taste (rasa), smell (gandha), touch (sparśa) sound (śabda), number (sāmkhya), magnitude (parimāna), distinctness (prthaktva), conjunction (samyoga), disjunction (vibhāga), remoteness (paratva), nearness (a-paratva), cognition (buddhi), pleasure (sukha), pain (dukkha), desire (icchā), aversion (dvesa), effort (prayatna), heaviness (gurutva), fluidity (dravatva), viscosity (sneha), tendency (samskāra), merit (dharma), and demerit (a-dharma).

Karma or action is physical movement. There are five kinds of action, namely: throwing upward (utksepaga), throwing downward (avaksepāga), contraction (ākuñcana), expansion (prasāraga) and locomotion (gamana) which includes all other kinds of actions.

Sāmānya or generality is the common essence of all the individuals of a class. It corresponds to the “universal”. It is an eternal entity which subsists in an identical form in all the individual of a class.

Viśesa or particularity is the extreme opposite of the universal (sāmānya). Viśesa stands for the ultimate difference or peculiarities of the part-less eternal substances. The differences of composite things may be explained by the differences of their parts. There are innumerable viśesas, since the individuals in whom they subsist are innumerable.

Samavāya or inherence is a permanent or eternal relation between two entities, of which one is in the other. The whole is in its parts, a quality or an action is in a substance, the universal is in the individuals, and particularity is in some simple eternal substance. This is called samavāya or inherence.

Abhāva or non-existence represents all negative facts. The reality of non-existence as distinct from existence cannot be denied. That a thing does not exist in a certain place at some time is as real a fact as that something else exists therein.

**Non-existence are of four kinds:**

- Prāg-abhāva, the non-existence of a thing before its production,
Pradhvaasābhāva, the non-existence of a thing on account of its destruction after production,

Atyantābhāva, the absence of a connection between two things for all time, e.g. the non-existence of colour in air, and

Anyonyābhāva, mutual non-existence, e.g. a bag is different from a pen. This means that either of them does not exist as the other.

Nyāya philosophy explains the origin and destruction of the world in terms of four kinds of atoms: earth, water, fire, and air. So it is called the atomic theory of the world. However, Nyāya does not ignore the moral and spiritual principles governing the processes of composition and decomposition of atoms. This philosophy believes that the world is a system of physical things and living beings having bodies with senses and possessing mind, intellect and egoism. All these exist and interact with one another in time, space and ākāśa.

The order of the world is a moral order in which the life and destiny of all individual selves are governed, not only by the physical laws, but also by the moral law of karma. The creation of the world is explained in the light of the unseen moral deserts (adsma) of individual selves. Thus, Nyāya philosophy combines pluralistic realism with theism and believes in the existence of God as the supreme Self, who is God is one, infinite and eternal. He is the omniscient and omnipotent cause of the creation, maintenance and destruction of the world. The existence of God is proved by the testimony of the Scriptures and inferences from the principle of causality, the moral law of adrcma, the authoritativeness of the Scriptures, and so on.

2.6 EDUCATIONAL IMPLICATIONS OF NYAYA PHILOSOPHY

- **Nyaya and the Aims of Education:** According to Nyaya, the main aim of education is the achievement of true knowledge of the self. This true knowledge of the self alone can lead to the achievement of the highest goal or Mukti. Nyaya philosophy believes that education should aim at the removal of ignorance which is the root of all defects.
Individuals may realize their true self through meditation and contemplation only when they get rid of their defects. Hence, education must aim at removing the defects such as: Rāga or desire, Dhesa or hatred, Moha or defective outlook.

- **Nyaya and the Curriculum:** In order to achieve the aim of Mukti through self realization, Nyaya advocates the study of scriptures, continuous study of philosophy and discussions with persons learned in philosophy. Nyaya believes that Mukti can be attained by direct perception or knowledge of ultimate realities of Self and the universe. These ultimate realities include categories (padarthas), which are termed as dravya (substance), guna (qualities), karma (action or motion), samanya (genus), vishesah (species), samavaya (relation), and abhava (negation). All these categories deal with the means to understand the universe and hence form the curriculum recommended by Nyaya Philosophy.

- **Nyaya and the Methods of Education:** Nyaya philosophy is basically treated as a theory of knowledge. Nyaya recognized four valid means (pramana) of acquiring valid knowledge: perception (pratyaksha), inference (anumāna), analogy or comparison (upamāna) and word or testimony of reliable sources (śabda). Besides these means, Nyaya philosophy established a theory to identify errors and the process by which errors are made in acquiring knowledge. These include Samaśya (problems, inconsistencies, doubts) and Viparyaya (contrariness, errors) which can be corrected or resolved by a systematic process of Tarka (reasoning).

  According to Nyaya, true knowledge comes through meditation, which involve: withdrawing the mind from sense organs, keeping it steady by efforts towards concentration, coming in contact with the self, and a keenness to get at the truth. Such meditation is usually hindered by physical and moral obstacles and such obstacles must be overcome by the practice of yoga.

- **Nyaya and the Discipline:** Like Samkhya and Yoga, Nyaya philosophy also recommends strict discipline of the body and mind.
In order to achieve success in meditation and contemplation, Nyaya advocates practice of yoga. Yama (restrains), Niyama (observances), and other prescribed methods of internal discipline such as penance, breath-regulation (pranayama), abstraction (pratyahara), contemplation (dhyana), and concentration (dharana) are important means of discipline according to Nyaya philosophy.

**Nyaya and the Role of Teacher:** Like Samkhya, Nyaya philosophy also accepts the teacher as an authority (*Aapta*). The teacher must lead students along the path of Mukti or liberation. The teacher must help students to achieve true knowledge about oneself. The teacher is a helper in the process of acquiring knowledge about the different categories or realities.

### 2.7 MEANING AND CONCEPT OF VEDANTA PHILOSOPHY

Vedanta or Uttara Mīmāṃsā is an orthodox (*āstika*) school of Indian philosophy. *Vedanta* literally means “end of the Vedas” and refers to the Upanishads as it comes at the end of the Vedas. It is called *Uttara Mīmāṃsā*, meaning ‘latter or higher enquiry’ as it was concerned with the *jñānakāGa* or Vedic knowledge part (the *Upanisads*) and is contrasted with *Pūrva Mīmāṃsā*, meaning ‘former or primary enquiry’ which deals with the *karmakāGa* or rituals part in the Vedas. However, Vedanta is an umbrella term for many sub-traditions and is not a single doctrine. Vedanta refers to all those philosophical traditions based on the *Prasthānatrayi*. The *Prasthānatrayi* refers to the three sources that contain the basic texts or axioms of Hindu philosophy that includes the *Upanisads*, the *Brahma Sutras* and the *Bhagavad Gita*.

All the different traditions of Vedanta philosophy, deals mainly with *Brahman*—the ultimate metaphysical reality, *Ātman* or *Jivatman*—the individual soul or self, and *Prakṛti*—the empirical world, the physical universe, or the body and matter. However, the different traditions differ in their views regarding the concept and the relations between them.
Some of the famous sub-traditions or schools of Vedanta include the following:

- **Advaita**: Advaita means absence of duality. It advocates non-dualism or monism. This school believes in the unity or oneness of existence. *Brahman* is the only unchanging metaphysical reality and identical to *Atman*. The physical world which is always changing is *Maya*. Everything is either Brahman or a projection of Brahman. The individual souls (atman) are also Brahman only. There is no duality or no limited individual souls (*Atman / Jivatma*), and no separate unlimited cosmic soul. All souls and existence across space and time is the same and one (monism). Spiritual liberation comes through this full comprehension and realization of oneness.

- **Vishishtadvaita**: Vishishtadvaita means distinguished non-dualism or qualified non-dualism. Saint, Ramanujacharya was its chief proponent. According to this school there are three ultimate realities, Brahman (Isvara), the soul (cit) and Nature or matter (acit). It acknowledges Brahman as the supreme reality, but differs from Advaita by attributing conditions and qualities to Brahman. Individual souls and Nature are projections of Isvara but they are not mere illusions. They are dependent realities, while Isvara is an independent reality.

- **Dvaita (Dualism)**: Dvaita means duality. This school was founded by Madhavacharya. According to this school Brahman is the highest, supreme reality, which was eternal, independent, and universal, while his creation represented the dependent reality. Brahman and the world are two equally real entities and not related in any way. Brahman or God has created the world, and the world stands separate from God and in an inferior position to God with no link between the two. God or Brahman controls the world and all world events.

- **Śuddhādvaita**: or pure monism was founded by Sri Vallabhacharya. This school believes that Brahman and the individual souls have the same essence and represent the same reality, but they are not the same, because Brahman is the whole while the souls are his parts.
Brahman is sat (truth), cit (pure consciousness) and ananda (bliss); Maya is the power of Brahman and not unreal. Brahman is both the creator and the created. All things that arise from him are eventually withdrawn by him into himself at the end of creation.

- **Bhedābheda**: Bhedābheda means “difference and non–difference” and is more a tradition than a school of Vedanta. The schools of this tradition emphasize that the individual self (Jīvatman) is both different and not different from Brahman.

### 2.7.1 Vedanta Philosophy and Metaphysics

According to Vedanta philosophy there are three fundamental metaphysical categories, they are:

1. The *Brahman* or God which is the ultimate reality,
2. Ātman or Jivātman which refers to the individual soul or self, and
3. *Prakṛti* or Jagat which is the empirical world, ever-changing physical universe, body and matter.

Shankaracharya espoused two conceptions of Brahman:

- **a)** *Parā* or Higher Brahman: the undifferentiated, absolute, infinite, transcendental, supra-relational Brahman beyond all thought and speech is defined as *parā Brahman*, or nirguna Brahman and is the Absolute of metaphysics, and

- **b)** *aparā* or Lower Brahman: the Brahman with qualities defined as *aparā Brahman* or *saguna Brahman*. The saguna Brahman is endowed with attributes and represents the personal God of religion.

However, Ramanujacharya rejected nirguna and accepted Brahman as Ishvara, the personal God who is the seat of all auspicious attributes, as the one reality. Madhvacharya, also advocated that Brahman or Vishnu is the supreme God or absolute reality. Nimbarka, in his dvaitadvata philosophy, accepted the Brahman both as nirguna and as saguna.

However, the different schools of Vedanta differ in their views about the relation they see between Ātman and Brahman. Advaita Vedanta, believes that there is no difference between Ātman and
Brahman and they are identical. On the other hand, according to Vishishtadvaita, Ātman is different from Brahman, though eternally connected with Him. Dvaita Vedanta says that Ātman is entirely different from Brahman. Shuddhadvaita, on the contrary believes that Ātman and Brahman are identical.

2.7.2 Vedanta Philosophy and Epistemology

In Indian philosophies, epistemology or the means of valid knowledge refers to Pramāna. Although there are different pramanas as means of true knowledge identified by Indian philosophies, the different schools of Vedanta accept different pramanas to be epistemologically valid. For example, Advaita Vedanta accepts all six pramanas, namely: Pratyakca (perception), Anumāna (inference), Upamāna (comparison and analogy), Arthāpatti (postulation), Anupalabdi (non-perception, negative proof), and Śabda (reliable testimony). On the other hand, Vishishtadvaita and Dvaita accept only three pramanas, namely: perception, inference and testimony.

However, all the schools of Vedanta accept that, knowledge cannot take place in the absence of mind. Moreover, for gaining knowledge, a relevant pramana (means of knowledge) must be used. Knowledge gained through a pramana cannot be negated by other pramanas. Knowledge is gained in the form of thought only. A thought comes to the mind due to the functioning of the organs and mind together. This thought envelops the object of knowledge and is technically called vṛtti vyapta. Vṛtti vyapta removes the ignorance about an object, or uncovers it. Then the reflection of consciousness takes place in the thought giving the rise to the knowledge. This is technically called bhasa vyapta or phala vyapta. Phala vyapta enlightens the object or makes it known. However, in case of gaining self knowledge, Vṛtti vyapta removes ignorance about the self. Once the ignorance is gone, there is no function to be done by the phala vyapta. Because, Brahman is self evident and the only truth which is not an object. Phala vyapta illuminates the object in case of objective knowledge only.

2.8 EDUCATIONAL IMPLICATIONS OF VEDANTA
PHILOSOPHY

According to Vedanta, the ultimate goal of a human life is salvation and true education is one, which leads towards salvation.

- **The Aims of Education:** According to Vedanta, education should focus on both the two aspects of human life, i.e. practical and spiritual aspects simultaneously. Development of these two aspects through education should lead towards the common goal of attainment of salvation. For this, education must aim at physical, mental and moral development of the individual. Education must develop a healthy body and a healthy mind. According to Vedanta, *citta vṛtti nirodha* is another important aim. *Citta vṛtti* refers to the thoughts that clutter the mind or fluctuations of the mind. Education must aim to take control of
cittā vr̥tti by quieting the mind, thereby reducing stress and increasing Self-awareness. Education or knowledge must dispel doubts, dogmas and darkness and lead one towards true knowledge about Brahman as well as about the self.

- **The Curriculum:** Curriculum according to Vedanta includes subjects of two categories: Para-vidya or (spiritual learning) Apara-vidya or (worldly learning). Paravidya includes the study of four Vedas besides vedangas, Upanishads, Puranas, Pitrya (rules for sacrifices for ancestors), vakovakya (logic), Ekayana (ethics), Devavidya (etymology), Brahmavidya etc. Apara-vidya included subjects like History, Ayurveda, Economics, Astrology, Physics, zoology, chemistry, science, bhutvidya, kalpavidya, the rashi (science of numbers) etc.

- **The Methods of Teaching:** Vedantic education advocated two main methods of Teaching: Maukhik (oral method) and chintan (method of thinking or reflection). In the oral method students were to memorize the mantras or the Vedic hymns. In teaching and learning, three stages of comprehension were emphasised, i.e Shravan (Hearing), Manan (meditation) and Nidhi-dhyasan (realization and experience). Other psychologically sound methods such as Question-Answer and illustration were also used. Self-study was another important method.

- **Discipline:** Vedantic education laid down strict rules of discipline for students as well as for teachers and wanted them to strictly adhere to such rules. Self discipline of body and mind considered very important. Observation of Brahmacharya or celibacy was compulsory for all pupils.

- **The Role of the Teacher:** The teacher or the Guru was the spiritual and educational parent of the pupil. He was extremely influential in the life and education of his pupil. He had two major jobs: to prepare the pupil for practical life and to make him acquire spirituality. Among these, the second was the main and most important job of the teacher. The teacher was the centre of education and no education could be imagined without him.
2.9 LET US SUM UP

- Indian schools of philosophy are classified into two main categories: (i) Astika, the orthodox
- Samkhya is one of the oldest schools of Indian philosophy. According to Samkhya, the Universe consists of two realities: Prakṛti, i.e. matter and Purusha, i.e. spirit or consciousness. Thus Samkhya is a philosophy of dualistic realism. Prakṛti consists of three guGa qualities: sattva, rajas and tamas. Purusha is the Supreme spirit or atma; the absolute as well as the self-conscious I; it is the disinterested spectator of the evolution of Prakṛti; the knower is Purusha and the known is Prakṛti.
- According to Samkhya, 24 tattvas or realities emerge or evolve out of Prakṛti. In conjunction with Purusha or the individual soul, the number becomes 25. These 25 tattvas are: Purusha, Prakṛti, Mahat, Ahamkara, Manas, the five panchendiryas, the five karmendriyas, the five tanmatras, and the five Mahabhutas.
- The three valid sources of knowledge according to Sankhya philosophy are: direct perception, inference and testimony.
- Sankhya philosophy has great significance for present-day education. Education in modern times is taken to mean the process of developing the potentialities that lie within the individual which is supported by Sankhya philosophy. Sankhya’s psychological views that knowledge leads to the modification of buddhi also reflect modern learning theories that explain education as the modification of behaviour.
- Nyāya philosophy, the founder of this school of philosophy was sage Aksāpada Gautama, is basically treated as a theory of knowledge. Nyaya recognized four valid means of valid knowledge: perception, inference, analogy or comparison and reliable testimony. Nyāya philosophy believes in pluralistic realism. According to Nyāya there are many independent realities which are broadly divided into two classes: being and non-being (bhāva and abhāva).
According to Nyaya, the main aim of education is the achievement of true knowledge of the self. This true knowledge of the self alone can lead to the achievement the highest good or Mukti.

Vedanta or Uttara Mīmāmsā is an orthodox (āstika) school of Indian philosophy. Vedanta literally means “end of the Vedas” and refers to the Upanishads as it comes at the end of the Vedas. Vedanta is an umbrella term for many sub-traditions and is not a single doctrine. All the different traditions of Vedanta philosophy, deals mainly with Brahman—the ultimate metaphysical reality, Ātman or Jivātman—the individual soul or self, and Prakṛti—the empirical world, the physical universe, or the body and matter.

According to Vedanta, the ultimate goal of a human life is salvation. True education is one, which leads towards salvation.

3.1 LEARNING OBJECTIVES

After going through this unit, you will be able to–

● describe the concept and characteristics of Buddhist Philosophy;
● discuss the implications of Buddhism on education;
● identify the merits and demerits of Buddhist Education;
● define the concepts of Jainism;
● state the characteristics of Jainism philosophy;
discuss the implications of Jainism on education; and
identify the merits and demerits of Jainism Education.

3.2 INTRODUCTION

Buddhism and Jainism are the two important branches of Indian philosophy. Both these schools are heterodox. They do not believe on the validity of the Vedas.

3.3 CONCEPT OF PHILOSOPHY OF BUDDHISM

Buddhism is one of the prominent schools of Indian philosophy. It originated as a result of revolt against the Vedic practices. It was against the violence, animal sacrifices, caste and class distinction and exploitations of the Vedic period. It was based on the principles of equal treatment of the people, non-violence and peace.

Gautam Buddha, the propounder of Buddhism believed that the world is full of miseries. Sight of old age, disease and dead body gave a great shock to the conscience of Gautam Buddha. He engaged himself in solving the problems of suffering and death by trying to discover their causes through meditation and yoga so as to attain Nirvana. All these gave rise to the philosophy of Buddhism.

The central doctrine of Buddhism is based upon the causal theory involving the formula ‘this happening, that happens’, which proceeds in a cyclic order in a sort of chain-reaction’. The start is made from the idea of ignorance (Avidya). From this proceeds greed, action, birth and rebirth and so on until the ultimate ignorance and greed are destroyed by knowledge.

The salient features of Buddhist philosophy are–

- **Four Noble Truths:** One of the basic characteristics of the Buddhist philosophy is the four noble truths as consisted in the teachings of Lord Buddha. They are—There is suffering (dukhha), there is a cause of suffering (dukhasamudaya), there is cessation of suffering (dukhanirodha), there is a way leading to the cessation of suffering (dukha-nirodh marg). Under first noble truth, he emphasized that
this world is full of sufferings. Old age, disease, death, etc. are all painful. He had also explained that the cause of distress, cause of pain and sufferings in human life is Trishna (thirst). He had also suggested the means of complete deliverance from all the pains and sufferings of human life.

● Eight Noble Path: Another prominent characteristic of Buddhism is the eight-fold path, i.e. adopting a middle course (madhyamik marg) to attain salvation. These are— Right Insight (Samyak Drishti), Right Will-power (Samyak Sankalp), Right Speech (Samyak Vak), Right Deeds (Samyak Karmant), Right Vocation (Samyak Aajiv), Right Exercise (Samyak Vyayam), Right Memory (Samyak Smriti) and Right Meditation (Samyak Samadhi).

● Twelve Noble Links: There are twelve main causes of suffering. This is known as theory of natural causation of suffering. Buddha had pointed out twelve links in the chain of suffering which are— Ignorance (avidya), Impressions (samskar), the initial consciousness of the embryo (vignana), mind and the body, the embryonic organism (nama-rupa), six organs of knowledge (shadayatan), sense contact (sparsa), sense experience (vedna), thirst (trishna), clinging (upadan), tendency to be born (bhava), rebirth (jati) and old age, death, etc. (jara-marana). These twelve links were arranged with reference to the three periods viz. past life, present life and future life. Our present life is an outcome of our deeds and samskar of previous birth. In present life, whatsoever our Samskar would be, same would determine our life conditions in next birth.

● Non-existence of Soul and God: Buddha believes that all things are transient. So, there cannot be any permanent soul or God. Though denying the continuity of an identical substance in man, Buddha does not deny the continuity of the stream of successive states that compose his life. In Buddhist philosophy, the place of God is taken by the universal doctrine of Karma, which governs the universe in such a way that every individual gets the mind, the body and the place in life that he deserves by his past deeds.
1) **Karma and Rebirth:** According to this doctrine, the present existence of an individual is, the effect of its past Karma and its future would be the effect of its present Karma. It believes that a person is happy or miserable only because of his actions. It believes in rebirth too.

2) **Nirvana:** Buddhist philosophy believes that attainment of Nirvana is the ultimate aim of life. Attaining Nirvana implies attainment of salvation, i.e. freedom from the attachments or bondages of ignorance.

3) **Non-violence:** Non-violence is a basic value of Buddhism. It spreads the message of non-violence and peace. It is dead against the animal sacrifices performed in the Vedic practices.

4) **Against the caste (varna) system:** Buddhism is against the rigid classification on the basis of Varnas, as prevalent in the Vedic system. He established equality among the people.

### 3.4 CHARACTERISTICS OF BUDDHIST EDUCATION

The Buddhist system of education is the most important system of education in medieval period. Buddhist education came into the existence in the 5th century B.C. when in the later part of Vedic system of education deprived the common people of their right to education. Hence the emergence of Buddhism provided the opportunity to obtain education. Buddhist system of education was monastic. All castes were admitted to Buddhist Sangha, which served as the religious centres of Buddhism as well as educational institutions during the Buddhist period.

The main characteristics of the Buddhist education system are—

1) **Education in Monastery:** Monasteries were the centre for imparting education during the Buddhist period. For admission the student had to present himself before the teacher and request him for giving education. The teacher was fully responsible for education of his pupil. In turn, the pupil had also to be responsive to the instructions received from the teacher. The student was not at all accountable to any other Bhikshuk in the monastery.
2) **Pabbajja:** Pabbajja was an accepted ceremony of the Buddhist monasteries. Pabbajja means going out. According to this ceremony the student after being admitted to a monastery had to renounce all his worldly and family relationship. An individual belonging to any caste could be admitted to a monastery and after being admitted he did not belong to any caste. After admission he had to change his old clothes and all old ways and the manners of living. For the Pabbajja ceremony the minimum age was eight years.

3) **Upasampada:** After the Pabbajja ceremony education continued for 12 years. When the students receive 12 years education he had to undergo the Upasampada ceremony. This ceremony was democratic in nature. The Shraman had to present himself before all other monks of the monastery. One could be admitted for the Upasampada ceremony only when the majority of the monks voted in favor of the same. After the Upasampada ceremony the Shraman was regarded as a full-fledged member of the monastery. On this occasion all his worldly and family relationship ended.

4) **Qualities and Responsibilities of the Teacher:** The teacher himself must spend at least 10 years as a monk and necessarily must have the purity of character, purity of thoughts and generosity. Both the teacher and student were responsible to the monastery. But regarding education, clothes, food and residence of the student monk, the teacher was fully responsible. The teacher was also responsible for any treatment of the student whenever he fell ill.

5) **Daily Routine of Students:** The daily routine of the students starts with arranging everything for the daily routine of the teacher. They cook food and clean his clothes and utensils. Whatever he acquired through begging alms, he would place before the teacher. The students always obeyed the teacher and none other. They were also responsible to keep the monastery and its surroundings clean. The students had to prepare themselves to receive education at any time whenever the teacher required him.
6) **Boarding and Lodging of the Students:** In Buddhist period, education was imparted through monasteries and viharas. The teacher and the students lived together in these institutions. They followed simple living and high thinking principle. Their lives were full of purity, nobleness, dutifulness and humanity.

Q.2: Identify the four noble truths taught by Buddha.

Q.3: What is the ultimate goal of Buddhist philosophy?

---

**3.5 EDUCATIONAL IMPLICATIONS OF BUDDHISM**

The principles of Buddhistic philosophy have great educational implications. Therefore, Buddhist education system is revered as one of the prominent ancient educational systems of India.

**3.5.1 Aims of Education**

The goal of Buddhist education is to attain wisdom. According to it, the main objective of our practice or cultivation was to achieve this ultimate wisdom. It believes that everyone has the potential to realize this state of ultimate wisdom, as it is an intrinsic part of our
nature. The Buddhist education system aimed at regaining our intrinsic nature. It also teaches absolute equality which stemmed from Buddha’s recognition that all sentient beings possess this innate wisdom and nature. Buddha’s teaching helps us to realize that innate, perfect, ultimate wisdom. The aims of Buddhist system of education may be pointed out as–

1) **Nirvana**: Education should aim at achieving Nirvana or self realization. It refers to emancipation from the earthly worries and miseries. Education should aim at giving eternal peace of mind and relieve oneself from physical sufferings.

2) **Development of personality**: Education was to control all the instinctive and physical needs and desires of man. Spiritual peace and happiness may be attained only through control of our senses. Education should train people to lead a simple life and a life of self discipline.

3) **Physical & intellectual development**: Jainism was in favour of both physical and intellectual development of the individual.

4) **Religious & spiritual development**: Another aim of Jainism was religious and spiritual development. Buddhist education aimed at propagation of the teachings of Buddhist religion as well as it emphasized on giving spiritual training to the learners.

5) **Preservation & spread of culture**: One of the main aims of the Buddhist education system was to propagate Buddhism in different parts of the world.

6) **Development of attitude of non-violence**: Education should generate the sense of non-violence in human mind. It should remove the narrow sense of killing of life for personal gain through the rituals of sacrifice.

### 3.5.2 Curriculum

The major objective of education being the spiritual development, study of religion naturally dominated the curriculum. It includes the study of the *Tripitaka*—*Suttanta, Vinaya* (precepts or
rules) and *Dhamma* (Commentaries) which emphasize on meditation, discipline and wisdom respectively. The curriculum of Buddhist education system may be divided into two types—primary and higher education. In primary education, reading, writing and arithmetic were taught. Pali and regional languages were used as the medium of instruction. In order to fulfill the vocational needs of the common people spinning, weaving, tailoring, dyeing, printing, agriculture, commerce, accountancy and cottage industries were included.

In higher education, curriculum had covered wide ranging subjects both intellectual and professional. They include philosophy, literature, logic, law, astronomy, medical science and warfare. Sanskrit used to dominate the higher studies. Provision was made for study of the four *Vedas*, *Vedangas*, *Purana*, *Samkhya*, *Yoga*, *Tantra*, *Ayurveda* & *Vedanta*, study of animals like elephants, horses and snakes. Everyone was free to choose his subject without any restriction.

### 3.5.3 Methods of Teaching

The methods of teaching followed in the Buddhist education system are almost same as those used during Vedic period. Following were the methods of teaching of Buddhist period—

1) **Oral Teaching:** The art of writing had been well developed up to the Buddhist period. But due to the shortage and non availability of writing material verbal (oral) method of teaching was still more prevalent. The teachers used to give lessons to the students who learnt them by heart. The teachers used to put questions on learning the lesson by heart.

2) **Discussion:** Discussion was one of the methods of teaching in Buddhist period because it impressed the general public. Scholars discussed the important questions. Discussion continued till every kind of doubts is cleared. To establish the disputes point the following evidences of eight kinds were required
theory, cause, example, parallelism, contradiction, evidence, argument and induction. The important of discussion encouraged the logic in the Buddhist period. The controversial matters could not be decided without logical arguments.

3) Tours: To fulfill the aim of propagating Buddhism and to give the students real and practical knowledge, tour was used as a method of teaching. Tours were given importance for educating people. After completion of the education the students were encouraged to undertake long tours.

4) Conferences: Conferences were arranged on full moon and first day of the month in Buddhist Sangha. The monks of different Sangha assembled and put forward their doubts freely. The attendance of every monk was compulsory in such conferences. An annual conference was arranged in which a well-renowned monk would challenge the whole Sangha to disprove his purity.

5) Meditation: Meditation was used as a method of attaining Nirvana.

3.5.4 Women Education

Women education during Buddhist period was at its lowest ebb, as the women folk were despised in the sense that Lord Buddha had regarded them as the source of all evils. So, he had advised during his life time not to admit women in monasteries. But after some time due to the insistence of his dear pupil Anand, Buddha had permitted about 500 women along with his step mother for admission in the Vihars with many restriction and reservations. Strict rules were enforced for women monks. The first two years was their probation period. The women monks were not allowed to meet any male monk in loneliness and their residence was arranged separately at a distant place. They were not given any permanent post in the Sangha. Some monks could give them religious instruction twice a month in the presence of another monk.
3.6 CRITICAL ANALYSIS OF BUDDHIST EDUCATION

Merits of Buddhist Education:
1) Buddhist education was imparted in well organized centers, monasteries and Vihara which were fit places for educational purpose. Education was more democratic in its structure as well as function.

2) Buddhist education was free from communal narrowness. It was given to all sections of people irrespective of caste and creed. It gave more importance to genuine personality of the students while giving admission. It was also secular in nature.

3) The teachers and the students lived together and they led a simple life in the monasteries. The students were kept away from the life of temptation and public impurities. This kind of life had helped them for ideal education and meditation.

4) Buddhist education laid much emphasis on balanced physical, mental and spiritual development of the students. It aimed development of high moral character and ideal personality in the students.

5) Both the teachers and students led a controlled and disciplined life. They kept themselves away from instinctive pleasures like music, dance, fragrance, receiving gifts from others, etc. They were not allowed to contact women in the Sanghaa.

6) There was a cordial and pampered relationship between the teacher and the students. The teacher considered the students as his own sons and took all care and responsibility of them. The students also revered the teachers like their father.

7) There was no system of corporal punishment. The teachers completely trusted the personality of the students. The students also exhibited the sense of politeness, obedience and simplicity in their educational life.

8) Education was imparted through local languages which made education easily accessible to the common masses. No undue importance was given to Sanskrit which was used only by a small section of the society.
9) Buddhist education helped to gain international importance. Students used to come from other countries for higher education. It developed cultural exchange between India and other countries of the world.

**Demerits of Buddhist Education:**

1) Buddhist education could not give the proper attention to the occupational, industrial and technical education.

2) It neglected social development because the Buddhist scholars devoted their whole lives to Sangha and Buddhism leaving their family life.

3) Following the principle of non-violence, Buddhist education system avoided military training which affected national defense.

4) The sanctity of the Sangha as an educational institution was destroyed as anti-social people were also given shelter in the Sangha.

5) Buddhist education system is considered undemocratic in nature as it totally discouraged women education. Girls were not allowed to get education in the Sanghas.

### 3.7 CONCEPT OF PHILOSOPHY OF JAINISM

Another important philosophy of the heterodox school of Indian philosophy is Jainism. It is one of the oldest living religions of the world. It is independent and not a branch or off shoot of any religion. Its contribution to Indian philosophy in particular and to the world is the thought of non violence, truth and peaceful co existence is significant and of great value. Apart from being a major Indian philosophical system, it is an Indian religion. Jainism takes an integral view of life. According to Jainism the highest aim or goal of life is to attain *Nirvana* or liberation. Jainism affirms that faith or knowledge or conduct alone by itself cannot take us to the path of liberation. We should have all the three to stride the path. Thus in Jainism, knowledge plays an important role in spiritual development to attain the goal of liberation. Jainism does not believe in God. They virtually adore the founders of their faith. Jainism encourages spiritual independence and self control, considered vital for spiritual development.
The salient features of Jainism philosophy are discussed as under–

- **Soul and Matter**: According to the Jainism, the universe is eternal and uncreated and contains two types of entities—souls (jīva) and non-living matter (ajīva). The suffering individual is a Jīva or a living, conscious substance which is inherently perfect. But there are certain obstacles which rob the soul of its native perfection. The material body identifies itself with the soul. The body is made of particles of matter. This body seeks the guiding force in the soul's own passions. The inanimate aspect i.e. ajīva of the cosmos is basically made up of atomic matter, but Jainism also lists four other substances—space, time, the medium of motion (dharma) and the medium of rest (adharma).

- **Anekantavada**: Jainism holds that a real thing is endowed with an infinite number of qualities and modes. All objects of knowledge are manifold or multiform (anekanta). They have infinite qualities and relations which distinguishes them from other objects. According to this principle, an object can be viewed from a number of perspectives. Jainism believes that perception gives only a partial view of what is perceived.

- **Syadvada**: It has been observed that absolute judgements are not possible in the Anekanta philosophy, because all objects are believed to be multiform. Therefore, every judgement expresses one aspect of reality and it is therefore, relative and subject to some condition.

- **Reality**: According to Jainism, the world is composed of substances of different kinds. But every substance consists of two characters—essential and accidental. Essential characters (guna) are those which remain in the substance as long as the substance remains. Accidental characters (paraya) come and go or they succeed one another.

- **Karma**: The relationship between jīva and ajīva is considered as the real bondage. It is believed that this bondage is due to deeds (karma). The jīva has to face the consequences of its deeds. Its colour, physical beauty, age and other senses are according to its deeds.

- **Salvation**: It is the separation of the soul from the inanimate. Detaching oneself from attachment and malice leads to salvation.
Salvation brings an end to all the miseries and pains and one becomes a master of the supreme knowledge.

- **Values:** Ignorance is the cause of bondage. Right knowledge is the act of liberation. Right faith, right knowledge and right conduct are the three jewels of Jainism. So, it is primarily ethical. Discipline is enforced strictly. There are five vows— non killing (*ahimsa*), truth (*Satya*), non stealing (*astaya*), non possessing (*aparigraha*) and virtuous life (*Brahmacharya*).

### 3.8 EDUCATIONAL IMPLICATIONS OF JAINISM

In view of Jainism, education is an important activity—a process of development, a path to the highest goal of life. Though Jainism has not directly propounded any educational theory, some educational implications may be derived from its principles.

#### 3.8.1 Aims of Education

Jainism does not have any predetermined absolute goals. It believes in the development of the self. The final aim is the development of personality. Individual and social aspects of personality are equally emphasized. Some of the important aims of education propounded by Jainism are—

- **Self-realization or Exaltation of Personality:** Jainism emphasizes the work of man’s personality and spiritual nature. Man’s soul is more important than his material structure. The aim of human life, according to Jainism, is to acquire the knowledge of his soul. Therefore, self-realization is admitted as the aim of education according to Jainism. The aim of education is to enable the child to realize the soul; recognize his real form, and proceed towards self knowledge.

- **Preservation and enrichment of cultural environment:** The child’s environment is not merely physical or material but cultural also. To Jainism, the spiritual or cultural environment is the fruit
of man’s own creative activities. It belongs to all and it is the common heritage of mankind. The aim of education should be to enter into this cultural heritage to the best of its capacity, preserve it and improve upon it.

- **Development of moral sense:** Another aim of education according to Jainism is to develop the child’s moral sense and thus enable him to distinguish right from wrong, to love good and despise evil. The goal of life as well as of education should be the realization of moral values by developing the spiritual character of the learner.

- **Development of inventive and creative powers:** Man is not helpless like other beings. He has got certain inventive and creative powers. Education should aim at developing these inventive and creative powers. Through these inventive and creative skills, he should change and modify the environment according to his needs and purposes.

- **Development of complete man:** Education, according to Jainism, should aim at developing child into a complete man with full physical, intellectual, moral, spiritual, emotional and cultural uplift. Physically he must be stout; intellectually he must be alert and think like a philosopher, and scientist; morally he should have determination to follow good and to avoid evil; spiritually he should have the freedom of mind, freedom from ignorance, wants and passions. The aim of education should be to train the whole man completely and fully for manhood and not only some parts of man.

- **Simple living and high thinking:** Jainism regards that simple living and high thinking should be another aim of education. More than the environment it is the mind that needs to be controlled. Education should aim at training the mind to control itself.

...............................................................................................
...............................................................................................
...............................................................................................
...............................................................................................

3.8.2 Curriculum

Jainism believes that curriculum should be constructed on the basis of the learner’s environment. Knowledge is relative. By knowing different parts, we may hope to get all about one relatively. It is possible to allot some place in the curriculum for those activities which cannot be said to be perfectly true. The multi-dimensionality of personality should be taken care of. According to Jainism the final truth in this material world should be acquired. Spiritual environment is more important but natural environment cannot be neglected. So, the curriculum should include ethics, religion, and philosophy but should not oppose science. Man’s intellectual, aesthetic, moral and religious activities are included in the spiritual environment. More aspect of individual’s growth was emphasized in terms of right conduct. Man is a combination of body and mind, of which the latter
is more important. But even mental activity would be difficult if physical needs are not fulfilled. Man can proceed towards self-realization only when he controls his physical needs. Therefore, the knowledge of the material world is also necessary. From this point of the curriculum would also include physical education. Knowledge of natural environment is acquired through natural sciences, therefore, Jainism does not condemn subjects like Physics, Chemistry, Biology, Geography, Astronomy, Geology, Botany and Zoology. For spiritual development subjects like the art, literature, ethics, philosophy, religion, psychology and music are more important. The study of these subjects develops the soul of man. Without the study of these subjects man would be confined to natural environment. The study of space and five elements are also emphasized in Jainism.

3.8.3 Methods of Teaching

Jainism provides lofty aims of education but speaks very little about methods of teaching. It advocates concentration as a method of teaching by which to attain knowledge. The very essence of education is concentration of mind. According to Jainism the power of concentration is the only key to the treasure-house of knowledge. It advocates that the very essence of education is concentration of mind not the collection of facts. One of the fundamental principles of education that Jainism follows is to see the best in every person. It believes that seeing and emphasizing the strong points in an individual is the best way of building that individual. Therefore, Jainism is against all negative attitudes and expressions. Religion is nothing unless it is practiced. The educational system should plan and provide activities which will develop such qualities. Progressive methods of education all over the world aim at making children active participants in the process of learning instead of being passive recipients. With this end in view, various kinds of activities have been devised. Jainism has suggested that our daily duties could become...
the basis of designing learning activities in the school and the home. Based on the philosophy of Jainism, the following may be listed as the characteristics of the methods of teaching—

- Teaching through senses
- Teaching should be tolerant and social
- Teaching should be ideally oriented
- Teaching should be action based
- Strong emphasis on memory
- Spiritual aspect stressed in teaching
- Mother tongue as the medium of instruction
- Debate and discussion as method of teaching
- Stressed residential life for students.

### 3.9 CRITICAL ANALYSIS OF EDUCATION IN JAINISM

**Merits of Education in Jainism:**

1) According to Jainism, education is free from any kind of discrimination. It was given to all sections of people.

2) Jainism emphasize residential education which encourage students and teachers to live together. It helps the students to get more opportunities for learning.

3) The curriculum suggested by Jainism is comprehensive and includes both natural and spiritual elements.

4) Jainism gives a very important place to moral principles in education. It propagated the five vows.

**Demerits of Education in Jainism**

1) Jainism over emphasize on moral and spiritual education.

2) Following the principle of non-violence, education in Jainism also avoids military training.

### 3.10 CONCLUSION

Buddhist education aimed at purity of character. Vihars or monasteries are the centers of education in Buddhist education. Monks
receive education in the Viharas. The total period of education is 22 years, 12 years as Pabbajja and 10 years Upasampada. The teacher is responsible for food, clothing and residence and also moral and religious education. Various methods of acquiring education are lecture and question-answer, discussion, tours, conferences, meditations, evidences and prominence etc.

Education in Jainism is integral and intrinsic to Jaina way of life. A Jaina way of life is away from extremes and is towards neutrality. Jaina education insists not only on non hurting or non killing; it also insists on forgiveness and love. No education is complete without these external values. Education in Jainism is based on universal values, its ethics and theory of knowledge, its non-absolutism (*anekantvada*) and its theory of manifold aspects of reality (*syadvada*) reflect a complete system of training or educating a life that fully and totally fulfills the ultimate and the highest goal of life.

### 3.11 LET US SUM UP

- Buddhism is a school of Indian philosophy based on the principles of equal treatment of the people, non-violence and peace.
- The central doctrine of Buddhism is based upon the causal theory involving the formula ‘this happening, that happens’, which proceeds in a cyclic order in a sort of chain-reaction’. The start is made from the idea of ignorance (*Avidya*).
- The main principles of Buddhism are– Four Noble Truths, Eight Noble Paths, Twelve Noble Links, Non-existence of Soul and God, Karma and Rebirth, Nirvana, Non-violence and no discrimination.
- Education was imparted in monastery with Pabbajja and Upasampada ceremony.
- The aims of Buddhist system of education– *Nirvana*, development of personality, physical & intellectual development, religious & spiritual development, preservation & spread of culture and development of attitude of non-violence.
The curriculum of Buddhist education system may be divided into two types—primary and higher education. In primary education, reading, writing and arithmetic were taught. In higher education, curriculum had covered both intellectual & professional subjects.

The methods of teaching followed in the Buddhist education system—oral teaching, discussion, tours, conferences, meditation.

During Buddhist period, women education was not encouraged much. In the later period, they were given education but with many restrictions.

Buddhist education system is appreciated for its organized structure, non-discriminatory nature, pure and simple life, balanced physical, mental and spiritual development of the students, controlled and disciplined life, cordial relationship between teacher and students and using local languages as medium of instruction.

Buddhist education system is criticized for neglecting occupational, industrial and technical education, social development, military training and discriminatory attitude towards women.

Jainism is a major Indian philosophical system and an Indian religion which takes an integral view of life.

According to Jainism the highest aim or goal of life is to attain Nirvana or liberation.

It believes that the universe is eternal and uncreated and contains two types of entities—souls (jīva) and non-living matter (ājīva).

It believes the principles of Anekantavada (infinite qualities and relations), Syadavada (absolute judgements are not possible) and Karma (bondage is due to deeds).

Reality consists of two characters—essential (guna) and accidental (paraya).

It follows the values of right faith, right knowledge and right conduct.

It believes that salvation brings an end to all the miseries and pains and one becomes a master of the supreme knowledge.

The aims of education according to Jainism are—self-realization or exaltation of personality, preservation and enrichment of cultural
environment, development of moral sense, development of inventive and creative powers, development of complete man and simple living and high thinking.

- Curriculum should be based on learner’s environment and it gave more importance to spiritual but natural subjects were also not neglected.
- The methods of teaching followed in education according to Jainism are— debate and discussion, importance to memory and sense training, activity based, idealistic, etc.
- The merits of Jainism are— equality, residential education, comprehensive curriculum, important place to moral principles. It is criticized mainly as it over emphasizes on moral and spiritual education.

4.1 LEARNING OBJECTIVES

After going through this unit, you will be able to–

- describe the concept of Islamic Philosophy of Education;
- identify the features of Islamic Education; and
- discuss the educational implications of Islamic Education.

4.2 INTRODUCTION

The word “Islam” has been derived from Arabic word “Sallam” meaning peace, complete submission (to God) and unbreakable (by stones of ignorance). Islam is a religion for all mankind and is relevant for both spiritual and mundane life. Islam does not recognize the differences on the basis of caste, creed, wealth, language, race, region etc. Islam contains just economic system, a well-balanced social system, codes of civil, criminal, international law and a philosophical outlook on the mission of life. Islam essentially stands for deep religious life and at the same time defines a
good living for the mankind. This unit is a reflection on the entire philosophy of Islam and its implication upon education.

4.3 CONCEPT OF ISLAMIC PHILOSOPHY

Islamic system of education had a long history of about nine hundred years. Muslim rule in the country had started with Md. Ghori who invaded India in 1194. They were originally the invaders of the country from the north, but gradually occupied the Indian Territory and started to rule over it. It was comparatively a longer period of time which had not only the influence of political system on the country, but also had its impact on cultural, religious and educational life of the people. Muslim rule gave a new turn to education in India and their system became an indispensible part of Indian culture. Their education was mainly dominated by religion. The people and the community were keeping deep faith in religion. It had also a new organization pattern of education in Indian, different from that of the Hindus and the Buddhist system.

So, Islam is a religion for all mankind and it is relevant for both spiritual and mundane life. Islam contains economic system a well–balanced social system, code of civil, criminal, international law, and philosophical outlook on the mission of life. Islam essentially stands for deep religious life and at the same time defines a good living for the mankind.

4.3.1 Basic Tenets of Islamic Thought

- Man is a creation of God who can choose to conform to his ordinates.
- Man has intelligence, will and speech. But man is also weak and forgetful.
- Conformity with God’s will determines a man’s destiny in this life and the next.
- The right way to live is according to God’s will, which he has revealed though the prophets.
- Islam is a restatement of what God has to say to man as a set of beliefs.
Right faith is essential for right action. Whether action is right or wrong will be judged on the basis of beliefs given in Quran and traditions of Prophet.

Islam has provided the social framework for a great culture for more than a thousand years.

The purpose of Islam is to create peace in the world and to establish sovereignty of God on earth.

Five fundamentals of Islam are Shahada (faith), Namaz or Salat (prayer), Zakat (Charity), Sawm or Ramazan (Fast) and Hajj (Pilgrimage to Mecca). Namaz is for God, Zakat is for helping poor and needy, Ramazan (fast) is for self purification and Hajj is for establishing universality of Islam.

Wiping out evils and flourishing good in the society are the important duties of Muslims on earth. It will be done in the same way as Prophet used to do during his life time.

Means and ends both should be pious and purpose of creating Muslims on earth is to establish peace and justice among humans irrespective of caste, creed or colour.

Jihad (Holy War) becomes incumbent on Muslims when people are not allowed to follow the fundamentals of Islam. Killing of innocent people even for the establishment of Islamic rule in the society is terrorism not jihad.

........................................................................................................................................
........................................................................................................................................
........................................................................................................................................
........................................................................................................................................
4.3.2 Features of Islamic Thought

- **Islam is universal**: The Islamic system is such that it makes all men as one community and does not make any destruction on the basis of language, race, colour, culture or history.

- **Islam is comprehensive**: It provides a complete code of conduct for living. It is not merely for individuals but nations as well.

- **Islam is eternal**: From the beginning of the universe, Islam has been the only true religion. Islam is not a novel religion that appeared in Arabia four countries ago, preached by the prophet Muhammad. It is the religion God made known on the day when man first appeared on the earth.

- **Islam does not make any distinction on the basis of colour**: Islam considers all human beings on the same footing and does not discriminate on the score of colour.

- Islam promotes harmony between the individual and the society, faith and science, the material and spiritual.

- **Islam is misunderstood**: It has been the misfortune of Islam that it has been misunderstood by various religion and their followers. The causes of misunderstanding are improper interpretations of Jihad, the alleged use of sword in spreading Islam, imposition of Jizya, polygamy, divorce.

4.4 BASIC PHILOSOPHY OF ISLAMIC THOUGHT

Islamic doctrine, law and thinking in general are based upon four sources or fundamental principles—(1) The Quran, (2) Sunnah, (3) ijma, and (consensus) (4) ijtihad (individual thought)

- The Quran is regarded as the verbative word, or speech, of God delivered to Muhammad by the archangel Gabriel divided into 114 chapters of unequal length, it is the fundamental sources of Islamic teaching.

- Sunnah was used by pre-Islamic Arabs to denote their Tribal or common law. In Islam it came to mean the example of the prophet—
i.e. his words and deeds are recorded in compilations known as Hadith. Hadith provide the written documentation of the prophet’s words and deeds.

- The doctrine of ijma, or consensus, was introduced in the 2nd century AH. Though conceived as a "consensus of scholars, ijma was in actual practice a more fundamental operative factor Ijtihad, meaning “to endeavor” or “to exert effort” was required to find the legal or doctrinal solution to a new problem.

- In the early period of Islam ijtihad took the form of individual opinion there was a wealth of conflicting and chaotic opinions.

The stream of Islamic education continued to flow in India for a period almost 500 years. Its system passed through the hands and religious education began and consequently a tendency toward professionalization or vocationalisation emerged. During this period, a great attention was paid to the growth of history and the art of writing history.

The ethical philosophy of Islam is that God is one and he is supreme Lord of all creation. He has created the Universe and Heavens to reveal truth. Everything good and evil in this world exists by His will. The root of the doctrine of Islam is in the belief of–

1) Immorality of the soul.
2) The reality of a future life and
3) Predestination.

The present life is momentary, is sport and past time. When death approaches a person, on Divine command, separates his soul from the body. The souls thus separated are preserved until the Last day i.e., “The Judgement Day” when the souls are reunited with the bodies for receiving the eternal rewards or punishment and it will be decided by the Divine Tribunal.

Again, Islam is a religion of practices consisting of–

a) The recitation of the confession of faith and serving God without associating everything with him.

b) In performing the ritual prayer.

c) In giving begging alms.

d) In fasting during the month of Ramadan,

e) Visiting al-kaba in pilgrimage in the month of Dul-Haj.
These five duties are the real foundations of the Islam and known as the Pillars of Islam (Arkan-Al-Din)

**CHECK YOUR PROGRESS**

**Q.4:** Fill in the blanks:

i) The five duties of Islam Known as ................;

ii) ................ was used by pre-Islamic Arabs to denote their Tribal or common law.

iii) ................ provide the written documentation of the prophet’s words and deeds.

**4.5 FIVE PILLARS OF ISLAM**

1) **Al-Shahada (Declaration of Faith):** All must pronounce their faith to enter into Islam. In front of witnesses they are required to declare the following “I testify there is no God but Allah, and I testify that Muhammad is the Messenger of God.” Pronouncing these word, is not enough however, one must believe in his or her heart that is true. “I testify there is no God but Allah” is meant to mean that there is no one or thing worthy of worship but Allah, since there are many things human might worship instead of one God. (Five pillars of Islam: Shahadat) 1.

For Salat (prayer) to be valid there are several requirements. First, purification, both spiritually and physically is of the utmost importance. Physically, purification is achieved through a complete, careful and regulated both and tooth’ brushing.

Secondly, the body must be sufficiently and properly covered during prayer. The covering is known as Niqab or Sitr. For female
this means covering all except the face, feet and hands. Male must only be covered from the navel to the knees.

Finally when performing Salat, one must face Mecca. In mosques there is a marker showing them which way to face. This provides a unified focus for the Islamic nation.

2) **Salat (Prayer):** The word salat is thought to be derived from Persian word “Salwa”. Salat means Du’a which is an important act of Islamic ceremonial prayer. Hence, the whole devotional exercise is called salat or worship. Salat is the first duty of a Muslim.

3) **Zakat (Alms–giving):** Muslims believe that all wealth belongs to God, and is only held by humans in trust. Therefore, Muslims are required to do with it what wishes and God wishes for a Muslim to be generous.

4) **Sawm (Fasting):** The fourth practical duty obligatory to the Faithful fasting during the Ramadan, the 9th month of the Islamic lunar calendar. Sawm is an Arabic word, means to the abandoning of the cravings of food for Allah’s sake.

   Sawm is continued for one full month till the sighting of the moon of Shawwal. Next day is celebrated all over the Muslim Dom as one of the important festivals i.e. Id-ul-Fitr”.

   During Ramadan, many devote Muslim invite the poor for meals. Fasting and Zakat –these are the two glories of Ramadan. The popular belief is the fasting will burn away the sins of men.

5) **Hajj (Pilgrimage):** All Muslims, except for those physically or financially unable, must make a pilgrimage to Mecca at least once in their life. Before performing the Hajj, all debts must be paid one’s will must be order in case of death on the perilous journey, and there must be enough money to provide for one’s family while gone.

   The annual Hajj takes place from the eight to the twelve days of the twelfth month of the Islamic calendar.

   People come from every continent in the world to perform the Hajj. This means all races languages and ethnic languages are represented.

### 4.6 SALIENT FEATURES OF ISLAMIC EDUCATION SYSTEM

Some of the distinguishing features and constituent characteristics of Islamic system of education may be described below:

1) **Aim of Education:** Islamic education was basically aimed at the development of religion. System of education was dominated by the royal authority for which their rulers were aiming at the spread of religion and culture in their newly established kingdom. Education was aimed at teaching the principles of Islam through study of Quran. In view of this aim every mosque or the place of worship had an educational institution attached to it. In fact the mosques were serving the purpose of schools. In order to propagate Islamic religion among the people, education was used as an instrument.’ Accordingly the religious leaders were playing the role of the teachers. Education was considered as act of developing the religious sentiment of people; child’s education was therefore made a religious compulsion for the community people.

Formation of desirable qualities of character was another aim of education. It believed that religious activity and behaviour can
promote the moral standard of life of an individual. Accordingly more
importance was given on teaching of the rules and behaviour of
prayer.

Development of material life and culture of the people was another
significant aim of education. Education was not merely aimed at
spiritual development but also for satisfaction of the material needs
of life.

2) Curriculum: It should be noted that the Vedic and Buddhist
curriculum did not have any impact on Muslim curriculum. Their
religion, language and culture being basically different, curricular
contents were prepared accordingly. Their curriculum may be broadly
divided into primary and higher.

Primary curriculum was meant for the Maqtabs where reading,
writing and arithmetic were taught. Besides these, the principles of
Quran and the procedures of worship were taught. The “Aiats” of
Quran were committed to memory, children were given moral
education through study of “Gulistan” and “Bastan of the famous
poet Sheikh Shaddi. Moreover the story of “Laila-Majnu, “Poetry of
Yusuf and Zulakha and “Sikandarnama “were taught to children. The
royal princesses were given training in administration and welfare in
their own families.

In Madrassa curriculum was of high order. It was divided into
two types as religious and practical. Along with the study of Quran
subjects like grammar, logic, science, medical, economics, politics,
law, history, philosophy and music were included. King Akbar had
modified the curriculum to make it more secular, practical and useful
for life. He also included Sanskrit language and culture for study of
the Hindu students.

3) Method of Teaching: Teaching method could not rise to the scientific
level. Importance was given merely on verbal learning and its
mechanical memory work. Most of the time and effort were spent
on mechanically committing to memory of the “Kalimas” of Quran.
No attention was given to students understanding of them. Akbar
the great had realized futility of such mechanical learning and tried to introduce more objective method. He ordered that every student should at first learn to write letters and then try to understand the meaning of the words. Names and size of the letters should be learnt within the two days. Such improved the method of teaching may be known from the famous book “Ain-E-Akbari.” He also tried to simplify the method of writing letters.

In higher education also the method of learning was mostly verbal. The word “Madrassa comes from the word “Darsha” that means “delivering lecture.” The learned scholars were invited to deliver lecture on different subjects. Method of experimentation was also used. One major characteristic of its teaching method was the use of the senior students to teach in the junior classes, popularly known as the “monitorial system.” In the absence of the teacher the junior students were taught through this system. There was no method of annual examination. Students were promoted to the higher classes on opinion and impression of the teacher received in the total performances.

4) Discipline: Method of discipline in Muslim education may be known as repressive. It was the rule of rod in which the teacher believed in the maintaining of discipline. He had the right to give punishment. Indisciplined students were physically punished by applying various methods. Principle of using punishment was preventive rather than reformative. Punishment was given so that it may serve as an example for others. Even the teachers were also subjected to punishment by the king. Although there were provision for giving reward to the meritorious students in their achievement for effective motivation. The royal authority used to give scholarship to such students on successful completion of their education. Provision was made for giving medal and certificate of merit. The individual showing scholarliness in the royal court was appointed in the high post of the government. So, it may be said that there was the system of giving reward and punishment in Muslim education.
5) **Teacher-Pupil Relationship:** As education was tempered by the religious sentiment, relationship between the teacher and the students was based on moral ideals. They were like the father and the son. Teachers were the religious leader and as such they were responsible persons in society. Their honesty and integrity of personality were beyond doubt. It was thought that education of the students was not possible without the blessings and good wishes of the teachers. Students naturally showed respect to the teacher and their bond on relationship was based on moral and religious sentiment. Although Muslim education was not residential like that of the Vedic and Buddhist system. As such cordial relation between them could reach the height of these system.

6) **Women’s Education:** During the reign of Muslim rulers education of women in general was not encouraged. They had the Purdah system and the male members did not like the women going out of home for education a result women’s education had suffered in general. More particularly the rural women were largely suffering from illiteracy. The British administration in the later period had also repeatedly drawn our attention to this situation.

   Although education of the Muslim women cannot be said as completely absent. The members of the royal families were given education privately. The girls were given education at home by private tutors. Rezia Sultana was a clear example in this regard. She not only got education of reading and writing but also had trained herself in administration and warcraft. During the Mughal rule education of the royal princess and ladies was reaching a new height. Gulbadan the daughter of Babar, was highly educated who wrote the Humayunnama, the royal ladies like Salima Nurjahan Mumtazmahal and Jahanara were highly educated and cultured Muslim women of the royal families. There was limited system of education for the ladies in the middle class family also. The elderly ladies and the widows used to give education to the girls of the neighbourhood in their houses. Such a system had served the need of woman’s education to a considerable degree.
7) **Useful Education**: One significant feature of Islamic education was that their education was more practical and need based rather than being religious and spiritual. More importance was given on study of the practical subjects that serve the need of individual and society. They included warfare, use of weapons singing, dancing, fine arts, handicraft, sculpture and architecture. The Muslim rulers had felt the need of military education in order to conquer, expand and defend their kingdom. They were also lovers of music, art, culture and literature for which provision was made for their training. A group of artisans and sculpture were well trained and developed in order to construct buildings, royal palaces, mosques and tombs in the kingdom. The Tajmahal, Fatehpur-Sikri, Buland Darwaya, Lalkillah of Delhi etc. give clear evidence of this.

8) **Organisational System of Education**: Organisational set–up of Muslim education was basically different from that of the Vedic and Buddhist system. Education was controlled and regulated by the royal authority for which autonomy was absent. The king used to establish. Maqtabs and Madrassa, offered financial assistance, gave scholarship prizes and recognition to students.

9) **Development of Literature and History**: Great attention was given to the growth of History and art of writing History infact tradition of writing history had its root in this period. Various forms of Literature also underwent significant growth.

10) **Encouragement to Persian language and Science**: Persian language was the medium of education, so special emphasis was given on the teaching of Arabic and Persian language, and the study of science subject was emphasized.

### 4.7 EDUCATIONAL IMPLICATION OF ISLAMIC THOUGHT

According to Muslim religion education was considered essential for every people. So there was a sense of compulsion in education among the Muslims in the name of religion. This system of education had established
co-ordination between religion and material needs of life. Along with the teaching of Quran there was the practice of teaching subjects which had practical value and importance.

Education gave priority to formation of character of the students. The system had given education based on religion and morality with a view to develop character and personality of the students.

Education had combined theoretical and practical aspect of knowledge of students in order that it may be helpful to solve the problems of real life. There was the provision of giving reward and scholarship to students as recognition to their ability. Such an act had psychological effect of motivation to students for learning and development.

In Muslim education there was the system of teaching history along with general education. People were encouraged to write history and record the contemporary events for future.

This education can be credited for giving education free of cost. The Maqtabs and Madrassas did not charge any tuition fees.

An encouraging aspect of Muslim education was that there was the royal initiative in organising assembly of scholars. The learned scholars were given due honour and recognition in the royal court.

Muslim education was free from the differences of caste system. As such low caste Hindu people were converted to Muslim religion for education and their social recognition.

4.8 LET US SUM UP

- The word “Islam” has been derived from Arabic word “Sallam” meaning peace, complete submission (to God) and unbreakable (by stones of ignorance).
- Islam is a religion for all mankind and it is relevant for both spiritual and mundane life. Islam contains economic system a well–balanced social system, code of civil, criminal, international law, and philosophical outlook on the mission of life.
- Islamic education was basically aims at development of religion.
Islamic doctrine, law and thinking in general are based upon four sources or fundamental principles—(1) The Quran, (2) Sunnah, (3) ijma, and (consensus) (4) ijtihad (individual thought).

In order to propagate Islamic religion among the people education was used as an instrument.

Formation of desirable qualities of character was another aim of Islamic education. It believed that religious activity and behaviour can promote the moral standard of life of an individual.

Primary curriculum was meant for the Maqtabs where reading writing and arithmetic were taught and in Madrassas curriculum was of high order.

In Islamic education system importance was merely given only verbal learning and its mechanical memory work.

5.1 LEARNING OBJECTIVES

After going through this unit, you will be able to–

- describe the concept of idealism philosophy;
- explain the importance of idealism in the field of education; and
- discuss the educational implications of idealism with special
  reference to metaphysics, epistemology and axiology.

5.2 INTRODUCTION

This unit is an important one to know about the philosophy of idealism
and its importance in determining the various aspects of education. Already
it is known by us that both education and philosophy are two sides of a
same coin. Generally philosophy provides the theoretical knowledge and on
the other hand, education is the instrument which tries to make it practical. In the words of John Adams, “Education is the dynamic side of philosophy. It is active aspect of philosophical belief, the practical means realizing the ideal of life.” To know about the influences of philosophical ideas on education, we should know about the various major schools of philosophy. In the present discussion we will take into consideration about one of the major and oldest schools of philosophy that is known as idealism.

5.3 MEANING OF IDEALISM

Idealism can be regarded as one of the oldest philosophies in the world. This school of thought or philosophy is mainly related with ideas and ideals. By nature it is spiritual philosophy. According to this philosophy the entire universe is an extension of the mind or soul. Idealism always explains man as well as the universe in terms of “spirit” or “mind”. Idealism considers the human personality as of supreme value and it constitutes the noblest work of God. Idealism asserts that the reality is to be found in man’s mind rather than in material world. In this way, the aims and objective of this philosophy is development of idea and ideals of a person.

Etymologically, the word “Idealism” has been derived from “Ideals” or “Ideas”. Here, it should be mentioned that Plato’s metaphysical represents mainly of ideas and those ideas are universal, eternal and absolute by nature. The philosophical explanation of Plato is known as idealism. Plato made the word “idea” most celebrated in philosophy. According to him what is in human mind is idea. Here, if we see the history of this particular philosophy, we also find that along with Plato, Socrates, Kant, Hegel, Spinoza, Berkeley, St. Augustine were supporters of this system. In our country India, Idealism has attained the highest watermark under the great seers and sages since the Vedic period. Most of the great Indian philosophers are more or less Idealist. All these idealists have claimed that the ideas are supreme rather than the physical forms. The physical material things are temporary by its nature, whereas the ideas never perish. According to Plato, there are ideas that are so real and enduring that objects of sense cannot realize them,
even there are ideas which have no physical representations. These include absolute beauty, goodness and essence. These are the realities.

In the words of Ross “Man or spirit is the essential world stuff, that the true reality is of a mental character”. Such ultimate reality of ideas has given the modern meaning to idealism.

### 5.3.1 Essence of Idealism

- According to the idealism philosophy, the ultimate reality is mental or spiritual. The material world is temporary and it is nothing but the manifestation of spirit. It believes in the universality of one ultimate reality and that is absolute or the self.

- Idealism has stated that the material world is changeable as well as mortal. On the other hand, the spirit is immortal and permanent. The world of ideas and values are more important than the world of matter. The ultimate reality, which consists of ideals and values are eternal.

- Idealism believes man as a spiritual being. Their spirit alone is able to control their environment. Human beings are the noblest creation of God.

- Idealism says that there is a universal mind which rules the whole universe. This universal power is named God by this philosophical thought and the God is the source of all powers and values. Human mind is also an important part of this universal mind.

- Values are absolute. These are neither created nor destroyed. The outstanding eternal values are Truth, Beauty and Goodness.

- According to Idealism, through thinking, meditations well as intuition we can realize the real knowledge which is logical. On the other hand the knowledge that is gained through our sense organs from the material world is not real. Therefore it asserts that reality can be found only in the minds of men, not in the world of matter.

- Values are absolute and fixed. Truth is the intellectual value, goodness is the moral value and beauty is the aesthetic value.
They already exist and man can discover them by their conscious efforts.

- Idealism thinks that man is central to the universe. He has a mind or spirit. A man’s rational self is superior to every other self-physical and emotional. It is the rational self which discovers truth.

- Idealism supports the fullest development of human personality. It should be noted here that according to idealists the fullest development of human personality means the achievement of perfection.

5.4 EDUCATIONAL IMPLICATIONS OF IDEALISM WITH SPECIAL REFERENCE TO METAPHYSICS, EPISTEMOLOGY AND AXIOLOGY

Idealism is an important part of education as it has its influence on every aspect of education. Before going in details about educational implications of idealism with reference to the metaphysics, epistemology and axiology, we should know their meaning. So, first of all let us discuss the Meaning of Metaphysics.
What is Metaphysics?

Metaphysics is the branch of philosophy which is responsible for the study of existence. It answers the question “What is?” It encompasses everything that exists, as well as the nature of existence itself. It says whether the world is real, or merely an illusion. It is a fundamental view of the world around us. Metaphysics is the foundation of philosophy. Without an explanation or an interpretation of the world around us, we would be helpless to deal with reality. We could not feed ourselves, or act to preserve our lives. Under metaphysics questions generally discussed are – what is the nature of the universe we live in? What is reality?

What is Epistemology?

Another important area of philosophy is epistemology. Epistemology generally deals with knowledge. Here questions usually discussed are how do we get knowledge? How does a man know what is real? Different philosophy has provided different answers.

What is Axiology?

This particular branch of philosophy generally deals with values. The problems of Axiology generally include such questions: what are the principles of life? How do they support the view of reality? Axiology includes standards or norms of conduct.

After knowing about some basic points of Idealistic philosophy let us discuss the influence of idealism on the various aspects of education. According to the supporter of idealism education is one of the most powerful inventions of mankind. Without education there is no difference between man and other animal. Education is the one and only instrument which leads the human world towards the highest moral conduct and deepest spiritual insight. Ultimately man will able to develop an insight into the truth, beauty and goodness. Idealism believes that education should help the individual to seek the truth and avoid error, enjoy the beauty and discard ugliness espouse the good and deprecate evil.

Since the very ancient period idealism has its influence on education. Most of the philosophers, educationists as well as thinkers from the Vedic Rishis to Gandhi, Tagore, Vivekananda, Aurobindo among others in India
and at the same time Socrates, Plato, Nunn, and Frobel among others in the Western world have emphasized spiritual development as an aim of education. All those idealists believe that man is born with a spiritual self and he can realize the spirituality and understand its real nature through the channel of education. Now, we are going to discuss the educational implication of idealism in the following way for our better understanding.

5.4.1 Idealism and Aims of Education

We have already known that according to idealism man is a spiritual being and God is the creator of them. Therefore, on the basis of such ideas idealism has given importance on shaping the educational aims and objectives. It prefers attainment of higher values, development of ideas, complete personality development, promotion of character, transformation of human nature in to the divine nature, and proper internal development along with spiritual enlightenment. In such a way idealists prescribed the following aims and objectives of education.

- **Growth and development of human personality**: The most important aims of education is to develop a well integrated human personality according to the idealism. Human individual is the noblest work of God. Therefore the most important responsibility of education is to develop the body, mind and spirit of each and every individual. The aim of education is to develop a natural man into an ideal man. The ideal man will be physically, intellectually, socially, emotionally and spiritually a perfect one.

- **Improved cultural environment**: Idealism stated that education is the way through which acquisition and enrichment of our cultural environment is easily possible. Culture is the complex whole, and the function of education is to preserve and transmit the cultural elements from one generation to the next. At the same time education should enable each individual to make their contribution to the development of their culture. The child has to
be trained to achieve the spirituality of the human race such as truth, goodness and truth in reality.

- **Universalisation of education**: It is already stated that idealism regards man as the noblest creation of God. Every mind is a significant part of God. So, it is not fair to make education available to only a small section of people in the society. Every individual has the right to fulfill their needs and expectations. Therefore education should be made available for all and it will be able to develop the spirit of brotherhood.

- **Self realization**: Idealism said that self realization is the final destination of education. It means knowing one's own nature. Human body cannot be regarded as the real self. His real self is his spiritual self. This is also called Brahma. Through self realization man can create harmony between the self and God.

- **Will power development**: Will power and enthusiasm are the assets behind the success of an individual. So, education should develop the will power in the students. “Simple living, high thinking” is the main motto of the idealistic view of education.

- **Morality Development**: According to this philosophy, development of moral sense in the mind of the child will make him able to distinguish between the right and wrong, good and bad. Therefore, sense of honesty, love, cooperation, sympathy, sincerity, purity should be developed by education.

- **Knowledge about the universal values**: It opines that the function of education is to help the child to explore the universal values. The duty of education is to enable the people to reconcile themselves to reality in all its manifestations and guide them to be united with God.

- **Development of Inventive and Creative powers**: It is a fact that the physical world is always in a state of change. Man should try to be inventive and creative in order to change and modify the environment according to his needs and mould nature to suit his purposes. Education should help the child in such situation to
change and modify the physical environment according to the need and also to have mastery over the material world.

### 5.4.2 Idealism and Curriculum

After the prescribed aims of education by Idealistic philosophy, let us discuss the curriculum to fulfill those mentioned aims. Curriculum is the main path or the way towards the realization of educational goal. Idealistic curriculum is basically prescribed on spiritual and cultural heritage of the child along with his self and personality development. Idealism does not regard material world as the final truth. Truth and values are permanent. This permanent truth is called soul. The aim of human life is the realization of this immortal soul. To realize this aim of education, idealists have stated that the curriculum should impart eternal values that are truth, beauty and goodness. These eternal values generally imply activities like the intellectual, aesthetic and moral. Giving importance on such activities idealistic education prefers the following subjects to be included in the curriculum.

- **First of all** idealistic education has given emphasize on cognitive development of an individual. So it should be known ‘what is cognitive development?’ It means all those mental, intellectual, moral and spiritual activities. It supports that to encourage the development of the above mentioned activities, inclusion of subjects like language, literature, history, geography, mathematics and science will be suitable. Moreover, religious faiths, philosophy, ethics should be included to teach moral education. According to the idealistic viewpoints 3Ms that are mathematics, morality, and metaphysics are essential for cognitive development of children.

- **Secondly** idealistic thought has laid emphasis on affective development. It is related to emotional, aesthetic, creative as well as cultural development. Therefore, it will be appropriate to include subjects like art, painting, drawing, songs, dance, music etc as the curriculum contents.
Lastly idealism has taken into consideration the development of physical health of individuals. For physical growth and development it prescribed subjects like games, sports, physical exercise, and yoga and also meditation etc. Along with these for vocational and economic development agriculture, industrial art, and trade should also be added here.

Thus based upon idealistic thought, curriculum should be constructed in such a way as to develop knowing, feeling and doing of the child’s life. To develop an all-round and balanced personality it has mentioned that curriculum must be designed with religious, moral, intellectual and physical activities. Actually idealism likes to give the individual such knowledge which have some permanent values. They should attach a higher importance to humanities rather than the physical or biological sciences. It likes to teach about art, culture, morality, history, philosophy and literature etc. It also gives importance to the teaching of all those subjects that centre on man and aid his moral as well as spiritual development. It expects only a fully developed human being for the pursuit of higher ideals.

### 5.4.3 Idealism and Methods of Teaching

After getting an overview of the curriculum of idealism, now it is time to know about real implementation of the prescribed courses in the real situation. In this regard Butler’s statement can be given here. He said “Idealists consider themselves creators and determiners of methods, not devotes of someone method.” They speak of the general nature of teaching. Any specific method to be adopted as the centre of learning is not clearly suggested by the idealists. So it can be said that though idealism is popular for its lofty and high spiritual aims of education, but method of teaching is regarded as the weakest aspects. They recommended that the method must be able to achieve the complete development of all the innate abilities of the children so that self realization is easily attained. Regarding methods the following have been getting special priority here.
Instruction Method: This method has implied the organized and sympathetic guidance by the teacher in teaching learning situation. It also indicates modification and refinement of the mind of the children. Therefore, idealists always support in giving the training of all kinds.

Activity Method: Another important prescription of idealism regarding the aims of education is the activity method or learning by doing. Such activities should be natural, continuous and progressive. This will help the children in self realization and manifestation of the innate tendencies or potentialities. Therefore according to them the instruction should be active. In this method of teaching famous and greatest contribution have been made by the idealists philosopher Froebel and Pestalozzi.

Experience: Experience is the mother of all kinds of learning. It has also its significant place in the idealistic method of teaching. The children should get the opportunity of learning by their own experiences. Here the teachers’ duty is to provide some insight into his own experience. Therefore freedom is the essential part of education. But the point to be noted is that this freedom should be provided under some controlled environment, not in the absolute one. Then freedom will help the children to be responsible.

It should be noted here that different idealists have recommended different methods of teaching. For example, Socrates had adopted the questioning method. Plato and his disciples however, changed it into the conversational method. One of his disciples Aristotle followed inductive and deductive method. Herbert also took help of discussion method and at times he suggested debate as a teaching technique. Thus, we can reach the conclusion that the idealists do not advocate properly any particular method to be superior. At times they prefer to use the story telling method, dramatization and sometimes, also advocate the use of maxims of teaching etc.
5.4.4 Idealism and Discipline

Self realization is the goal of life and the aim of education. To realize this aim, idealists generally do not support free discipline. They stated that strict discipline is essential in the educational environment for realizing the self. The child cannot attain his complete all-round development until and unless he submits himself to a process of discipline. Therefore, another duty of the teacher in the educational environment is to impose discipline upon his students. Freedom is not a license; it should be regulated by an authority. So, the teacher should create an environment which will help the students to realize the higher values of life through self-discipline. He should act as a guide at each and every step and should also encourage the students to realize the higher values of life and attain self realization. The power of self realization can be worked through self discipline. For our better understanding the following points can be pointed out.

- Idealism suggests inner discipline.
- It has stressed on the cultivation of higher values through moral education.
- Idealism accepts freedom within some boundaries.
- Teacher’s duty is to create environment of self discipline.
- Discipline should be the product of our moral and cultural aspects.

5.4.5 Idealism and Teacher

Since learning is not reading but realization, the teachers occupied their place in the society, next to that of God. According to the idealistic philosophy also the role of the teacher is very much significant. This philosophy regards the teacher as the Preceptor or Guru. “Gu” means darkness and “ru” means its removal. In this way teacher is regarded as the remover of darkness of ignorance. Teacher should have the ideal personality and be a self realized
person. If the teacher becomes an embodiment of right conduct in thought, word as well as deed, the students by their association will learn and develop the qualities for self realization. He should act like a friend, philosopher and guide for his students. The teacher’s duty is not confined to giving lessons only. He should also advise, direct and even control the behavior of the students so that they can achieve perfection in life.

Adams opined that both the educand and the educator are two parts of the intellectual universe and both are equally important. The educator inspires the educand to realize the ideals of truth, goodness, and beauty and guides him along the path to its realization. The teacher should be able to guide the students with love and sympathy. He should not create any fear in the minds of the students. He should present his ideals of conduct for the educand to follow and will see that his environment is conducive to the realization of his spiritual potentialities. The following points can be stated for better understanding–

- Idealism regards teacher as the spiritual guide.
- Teacher should develop an ideal personality.
- Teachers are the sources of spiritual development.
- Teacher should be a self realized man.
- He has to check unnecessary movements on the parts of the students.
- Most importantly teacher is regarded as a friend, philosopher and guide.

5.5 RELEVANCE OF IDEALISM IN EDUCATION

Idealism can be called the father of all philosophies. It has made a significant contribution towards the development of education and its foundation. As a comprehensive philosophy, idealistic thoughts have highlighted all aspects of education as a whole. Though it is a western philosophy, still it has its impact on the emerging Indian society also. The following points can be stated here in this regard.

- **Lofty Aims of Education**: Idealism is relevant to the education in emerging Indian society also, because it provides quite lofty aims of education such as self realization, emancipation, harmony between nature and man, understanding of truth, beauty and goodness etc.

- **Preservation of Cultural Heritage**: This philosophy seeks to preserve the cultural heritage of the past by transmitting it to the next generation. As a result our future generation will be able to continue it. A great priority is given by this philosophy to studying and learning systematically organized bodies of knowledge and to cultivation of socially acceptable standards of behaviour.

- **Teachers’ High Position**: The teacher is regarded as a “Co-worker with God in perfecting man” by the idealistic point of view. He is to be the model of knowledge as well as the values that the students of the emerging society can imitate. Accordingly, the personality of the
teacher becomes the single most important aspect in the pupil’s learning experience.

- **Self Discipline:** They have given emphasis on self discipline. Human behavior should have the internal control rather than some external imposition. For natural development freedom is required, but freedom cannot be enjoyed without self discipline. It can make the environment quiet and peaceful.

- **Moral Development:** In the present human world morality is degraded. Therefore moral development is being considered as an urgent need. It is idealism in education which can educate the people to develop a moral sense of their own.

### 5.6 LET US SUM UP

- Idealism considers the human personality as of supreme value and it constitutes the noblest work of God.
- Etymologically the word “Idealism” has been derived from “Ideals” or “Ideas”.
- Idealism is basically a philosophy of life and it has exercised, like all philosophies of life, a general rather than a specific influence on education.
- Metaphysics is the branch of philosophy which is responsible for the study of existence.
- Epistemology generally deals with knowledge.
- While going to discuss these philosophies we have gained knowledge about how many idealistic viewpoints have their influence on different aspects of education.
- Most of the philosophers, educationists as well as thinkers from the Vedic Rishis to Gandhi, Tagore, Vivekananda, Aurobindo among others in India and at the same time Socrates, Plato, Nunn, and Frobel among others in the western world have emphasized spiritual development as an aim of education.
As one of the oldest philosophies, idealism has given importance to self-realization. According to this philosophy, the material world is changeable.

This philosophy regards the teacher as the Preceptor or Guru. “Gu” means darkness and “ru” means its removal. In this way, the teacher is regarded as the remover of darkness of ignorance.

Idealism has given guidelines regarding the aims of education, curriculum, methods of teaching, teacher’s role and discipline also.

Idealism has its lofty aims of education which has given importance on higher values of life.

6.9 Possible Questions

6.1 LEARNING OBJECTIVES

After going through this unit, you will able to—

● describe about the concept of naturalism philosophy;
● recognize the importance of naturalism in the field of education; and
● explain the educational implications of naturalism with special reference to metaphysics, epistemology and axiology.
6.2 INTRODUCTION

After having knowledge about idealistic philosophical thought as well as its influence on education, now we can proceed towards another important school of philosophy that is naturalism. Historically, naturalism as a philosophy of education developed in the 19th century. It was a reaction against humanism and medieval scholarship, which laid emphasis on book learning. Social curricula were seen to be at fault, and a radical change of aim and method on more natural lines was called for, by this school of thought.

6.3 MEANING OF NATURALISM

Since naturalism is an old philosophy in the western philosophical thought, it begins with the explanation of varied hues. It is the philosophical position, says Rusk, adopted by those who approach philosophy from the purely scientific standpoint. Naturalism explains phenomena on the basis of natural laws. According to this philosophy, nature is the ultimate reality. It has stated that the ultimate reality is matter, not the mind or spirit as prescribed by the Idealism philosophy. It simply denies the existence of the spiritual world. The material world is generally governed by the system of natural laws and man. There is nothing beyond nature, behind nature and other than nature.

While studying about naturalism, we should also know about its supporters. Bacon, Thomas Hobbes, Rousseau, Herbert Spencer, Nunn, Hurley, W. E. Hocking, James Ward are the chief exponents of this particular philosophical thought.

In the words of James Ward, “Naturalism is the doctrine which separates nature from God and subordinate spirit to matter and sets up unchangeable laws as supreme.”

Hocking also remarked that, “Naturalism denies the existence of anything beyond nature, beyond nature, behind nature and other than nature, such as supernatural or other worldly.”

Therefore, it can be concluded that naturalism implies that nature is the self sufficient entity that is complete by her and regulated by her own
laws. They believe only in the experimental and empirical world not in the spiritual world.

6.3.1 Characteristics of Naturalism

The main characteristics of Naturalistic Philosophy may be summarized as follows:

- According to naturalism nature is the final reality. All things have originated from matter and all are ultimately to be reduced to that.
- They opined the view that mind is the brain functioning and brain is matter.
- Laws of nature are unchangeable and the entire universe is governed by them. Science reveals the mysteries of nature; hence only that knowledge is true that is derived from science.
- Real knowledge comes through our senses. Matter is within the knowledge of human senses, and therefore the final truth can be known through the senses.
- Divine inspiration, revelation, strength of prayer, power of soul, other world-these are all illusory concept that mislead human mind.

6.3.2 Three folds Meaning of Nature

According to Rousseau, nature has the following three definite meaning.

- **Nature as equivalent to endowment**: Man’s instinct, primitive emotions and unsophisticated judgment are held to be trustworthy and reliable guides in human life, which may be called nature. For Rousseau, education should be provided according to the nature of the child. Nature means the natural dispositions of a child. Education should be according to the child’s natural abilities, interest, aptitude, instincts, impulses etc.

- **Negative education**: The second meaning of nature is a negative one. According to Rousseau, society is not natural. It is the outcome of an artificial contract. Further he stated that “what is
natural is good and what is conventional or artificial is evil. Nature and society thus become opposed to each other; nature is accordingly defined negatively to society.” Education should not be based on the forms of the society. Rather it should be totally based on knowledge of the true nature of man.

- **Positive Education**: The third meaning of nature according to Rousseau is a positive one. Education should take place in natural surroundings in natural phenomena. Rousseau says that nature is the best teacher and the best education can be obtained from it.

### 6.3.3 Essence of Naturalism

- Nature alone is the reality.
- Unchanging laws of nature explain all the events, occurrences of the world.
- Material world is the real world. All things have originated from matter and all are ultimately to be reduced to matter.
- The ultimate reality is matter. God, Soul, Mind, Heaven and Hell, Moral Values super human wonders are only illusion.
- Science or the scientific knowledge is true because it is based on observation and experimentation.
- The greatest slogan of naturalism is “Follow Nature”. The natural development of a child is possible only in the natural environment rather than an environment that is artificially designed.
- Senses are the gateways of knowledge according to naturalists. Real knowledge can come through our sense organs.
- Child is born good by nature. But it is the society that makes him bad. Man must remain away from the society if he wants to remain pure and unsophisticated.
- There is no possibility of any super natural being and soul or supreme power. Devine inspiration, meditation etc mislead the human mind.
6.4 EDUCATIONAL IMPLICATIONS OF NATURALISM WITH SPECIAL REFERENCE TO METAPHYSICS, EPISTEMOLOGY AND AXIOLOGY

Like other philosophies, naturalism has also its influence on education. In fact, in the history of educational philosophy naturalism can be said to be the revolutionary movement. History and philosophy are almost silent specifically in regard to naturalism in education. Even, naturalism is still commonly practised in present day education system. Rousseau was the pioneer of the campaign of using naturalistic ideas in the field of education. In his famous book “Emile” his ideas on natural education as well as natural child have been reflected. In this regard we can also mention the name Adams and Herbert Spencer. Herbert Spencer wrote four essays dealing with naturalism in education in his book “Education: Intellectual, Moral and Physical.” Thus naturalism has emerged on the educational field.

As we already discussed the concept of metaphysics, epistemology and axiology, now we will discuss naturalism in education with reference to the mentioned terms.
6.4.1 Principles of Naturalistic Education

Rousseau has remarked “Everything is good as it comes from the hands of the author of nature, but everything degenerates in the hands of man.” In the education system according to naturalism there is no place for class rooms, text books, time tables, curriculum and examination system etc. Spontaneous development of child is given importance here. “Back to Nature” is the famous slogan here. The following are the main principles of naturalistic education system.

- Naturalism believes that the final reality is the matter. All things have come from matter and all are ultimately reduced to matter. Matter always exists, but it changes form time to time.
- This philosophy maintains that mind is to be described as the brain functioning and the brain is a matter. It does not have any spiritual entity for our consideration.
- Mind is understood in terms of its intellectual activity. Experience of things, imagination, reasoning and problem solving are the process of our mental activity.
- Naturalism always believes in science and its experimentation. Science reveals the mystery of nature and only that knowledge is true which is derived from science.
- It maintains that human mind is going to work through experiences of the senses. True knowledge comes only from the human senses and not from the spiritual power as the idealists maintain.
- This philosophy does not believe in the spiritual terms. Concepts like divine inspiration, power of the soul, strength of prayer are illusory and they mislead the mind.
- This philosophy believes that mind and its process can be studied through the senses. Sense-experiences are the only knowledge which one can believe upon.
- It is the science of psychology that studies and explains the functions of mind. Thus, psychology is described as the positive and experiential science of mind.
Philosophy of naturalism does not believe in the existence of the pre-supposed and pre-determined values of life. The values of life are determined by man through the contact with the reality and its needs.

This philosophy gives all out importance to individual. Individuality of man can be understood in terms of the biological potentialities and their prospects.

6.4.2 Naturalism and aims of Education

On the formulation of educational aims different naturalists have expressed different ideas regarding the aims of education. Let us discuss the main aims as propounded by all naturalists under the following heads.

- **Present and future happiness**: The school of naturalism aims at achieving present and future happiness of the children. According to the naturalists, for the natural man natural impulses are in themselves good, because they yield pleasure. Hence, education is guided by pleasure principle. This pleasure is not necessarily immediate pleasure, but the pleasure that is lasting and permanent. Therefore, self restraint in education, prudence and the ability to evaluate pleasure are considered as the highest virtues. Cultivation of these virtues will lead our life to secure present as well as future happiness.

- **For struggle of existence**: In order to survive one has to constantly struggle with the environment. Those who fail to struggle do not survive. They altogether disappear and decay. Therefore, the aim of education must be to equip the individual or the nation for that struggle to ensure survival in the world.

- **Self Expression**: While the aim of education according to idealism is self realization, on the other hand naturalistic thought has emphasized on self expression and self preservation. In the process of education, they do not educate the child, but merely prepare him for education. The early stage of education of the
child is nothing but the wastage of time. Therefore, nature of the child should be given time to grow and develop, in a free atmosphere. As a result the child can express his self naturally.

➢ **Training of the instincts**: Naturalists support that our instincts are the basis of all education. The teacher should fully exploit the instincts and try to modify the behaviour of the child.

➢ **Development of the individuality**: Sir Percy Nunn, the educational philosopher has clearly emphasized that the aims of education should be according to the development of the individuality of the child. Education therefore, must enable every individual child for the development of innate potentialities.

### 6.4.3 Naturalism and Curriculum

Education is life itself, not a preparation for an uncertain future that burdens the child with all sorts of restrictions for some far off happiness which he may never enjoy. Hence, fixed and prescribed course of study is not at all desirable for the education of the students. The naturalists do not prescribe any fixed curriculum for the child. Education is a natural, not an artificial process. It is a development from within, not an accretion from without. It does not come through response to external force, but through the working of natural instincts and interests. Generally naturalistic curriculum can be divided into two stages. They are earlier stage and later stage.

In the earlier stage, they have supported the sense training, because sense organs are the gateways of all kinds of knowledge. For example, Montessori schools through “Didactic Apparatus” and Kindergarten schools through “Gift and Occupation” give sensory education.

In the later stage, the subjects like nature study, agriculture, gardening, arts, crafts, Botany, Zoology, Geology, and Geography should be included in the curriculum according to the naturalistic viewpoints.
Rousseau has tried to shift the centre of gravity from the curriculum to the child. Borrowing this idea Percy Nunn also stated that “The school must be thought of primarily not a place where the young are disciplined in certain forms of activity, namely, those that are of great and most permanent significances in the wider world.” Rousseau thought of curriculum in terms of activity and experience rather than knowledge to be acquired and facts to store. His curriculum does not aim at educating the child but merely preparing him for education.

On the other hand Spencer has said that curriculum should be determined in the content of life activities which can help a person to lead a “complete life”. These activities are:

- **Direct self preservation**: Physical education, hygiene, physiology etc.
- **Economic efficiency**: Agriculture, crafts, industrial arts, physical and biological sciences.
- **Family life**: Child psychology, home science.
- **Civic activities**: History, economics, sociology, political science.
- **Enjoyment of leisure**: Literature, art, music, dance, drawing, painting.

### 6.4.4 Naturalism and Method of Teaching

Naturalism has opposed the old traditional method of teaching. Rousseau considered that education is the process of living. Moreover, according to the other naturalists also our old traditional as well as bookish system of education system is one of the obstacles in the natural development of a child. Some of the methods of teaching that are prescribed by the naturalists.

- **Heuristic method**: It means to discover or to find out. According to naturalism this method of teaching should be used while teaching the science and mathematics subjects. The teacher should provide an environment where the children can get the opportunity to find out the truth.
Learning by direct experience: Naturalism is against the chalk and talk method. They advocated the learning by direct experiences of things or learning by doing self activity. Here the statement of Rousseau can be stated as “Give your scholar no verbal lessons, he should be taught by experience alone.”

Play way method: Play helps the child to express them fully. Therefore especially in the early period of life, the child should be educated through the play way method.

Self government: The naturalists very clearly and psychologically have prescribed the concept of self government. Accordingly, the students should be made self governed and self ruled; thereby the students will solve their own problems and learn different qualities such as how to be a good social member, citizen or leader.

6.4.5 Naturalism and Discipline

This philosophy is remarkable so far its concept of freedom and discipline in education are concerned. It believes in the inner goodness of the child and accordingly gives full freedom for development of such goodness inherent in the child. Its concept of discipline is popularly known as “Free-discipline”. We can highlight on the following points to consider the concept of discipline in the philosophy of Naturalism:

- Naturalism believes in the native and innate goodness of the child.
- It maintains that child should be given natural freedom for self-expression and development.
- Its concept of discipline is free, where all restrictions and control of the authority are completely removed.
- Child should be kept away from all sorts of suppression and repression through punishment and in its place be given full-freedom for self-expression.
- Nature is able to make the child disciplined better than man according to naturalism.
It also believes that child may be punished by nature according to the natural consequences of his own act of wrong doing.

6.4.6 Naturalism and Teacher

According to naturalism the teacher is an observer of the child’s development rather than a giver of information, ideas, ideals etc. His place is normally behind the scene. In the teaching learning environment, he not only works as an observer but also “as a setter of the stage, a supplier of materials and opportunities, a provider of an ideal environment, a creator of conditions under which natural development takes place.”

A teacher is not a positive but a negative educator here. He is a mere observer. He should be one among children and not make his presence felt. He should not be the “village school master” described by Goldsmith. The naturalist teacher should be lovable, sympathetic, and affectionate. He is the friend, philosopher and guide. He is bound to give all favorable circumstances and opportunities for the natural development of his students.

Summarizing the view points of naturalism on role of the teacher following points may be drawn:

- Teacher should not interfere in the self-activity and self-learning of the students.
- He/She should help and guide the child when he is found to be unable to do so.
- A teacher should be keen observer on the educational progress of the child from behind the screen.
- Teacher is responsible to create a natural environment for self-learning and self-education of the child.
- Teacher should only play his role as a director or superintendent rather than as a teacher.
- In order to play his responsible role in a more effective way teacher needs to be professionally trained.
CHECK YOUR PROGRESS

Q.4: Who was the pioneer of the campaign of using naturalistic ideas in the field of education?

Q.5: Who emphasized that the aims of education should be according to the development of the individuality of the child?

6.5 RELEVANCE OF NATURALISM IN EDUCATION IN THE EMERGING INDIAN SOCIETY

Naturalism obviously has its relevance in education. Since naturalism is considered as a modern school of thought, it is relevant in the present educational system of India for the following reasons.

- **Child-centric education:** Naturalists have advocated child-centric education in which the child is not for education but education is for the child. Sir John Adams called it the concept of paedocentric education. The child should be provided with the kind of environment which will encourage him to develop the innate goodness and natural sense of the beautiful.

- **Psychological tendency in education:** Naturalism gave rise to the psychological tendency in education and it is quite relevant for educating children in modern Indian school also. By stressing the fact of the child’s nature it emphasized the importance of natural development. It has been established that the child’s mental activities like thinking, reasoning, problem solving, recalling, recognition, learning etc trigger from those similar activities of adult. Hence, naturalists stressed the value of psychology for education.
• **Freedom to the child:** Another aspect of naturalism is that education must give the child an opportunity of making a free choice in everything that it wants to study or play or even the manner in which it wants to behave. No external restraints should be placed on this freedom.

• **Play as the most natural method of teaching:** Naturalism considered childhood as playhood. Play is one of the most powerful opportunities for constructive activity. It is an important medium of creative education. Therefore, naturalists have placed adequate stress on values of play, which the modern Indian educationists also accept as relevant without reservation.

• **The Teacher as an observer:** Naturalism considered the teacher as an observer of the development of the child rather than a provider of information, ideas or moulders of character. Teacher has to create a joyful environment for education of the child in a natural way.

---

### 6.6 LET US SUM UP

- Naturalism as a philosophy of education developed in the 19th century.
- Naturalism is the oldest philosophy.
- Bacon, Thomas Hobbes, Rousseau, Herbert Spencer, Nunn, Hurley, W. E. Hocking, James Ward are the chief exponents of this particular philosophical thought.
- Naturalism explains phenomena on the basis of natural laws. According to this philosophy, nature is the ultimate reality.
- Education is a natural, not an artificial process.
- Generally naturalistic curriculum can be divided into two stages. They are earlier stage and later stage—In the earlier stage, they have supported the sense training, because sense organs are the gateways of all kinds of knowledge. For example, Montessori schools through “Didactic Apparatus” and Kindergarten schools through “Gift and Occupation” give sensory education. In the later stage, the subjects like nature study, agriculture, gardening, arts, crafts, Botany,
Zoology, Geology, and Geography should be included in the curriculum according to the naturalistic viewpoints.

- Naturalism has opposed the old traditional method of teaching.
- According to naturalism the teacher is an observer of the child’s development rather than a giver of information, ideas, ideals etc.
- Naturalism gave rise to the psychological tendency in education and it is quite relevant for educating children in modern Indian school.
- Naturalists have placed adequate stress on values of play, which the modern Indian educationists also accept as relevant without reservation.
- Naturalism considered the teacher as an observer of the development of the child rather than a provider of information, ideas or moulders of character.

### 6.8 ANSWERS TO CHECK YOUR PROGRESS

**Ans. to Q. No. 1:** Naturalism explains phenomena on the basis of natural laws. According to this philosophy, nature is the ultimate reality.

**Ans. to Q. No. 2:** Bacon, Thomas Hobbes, Rousseau, Herbert Spencer, Nunn, Hurley, W. E. Hocking, James Ward are the chief exponents of the philosophy of Naturalism.
Ans. to Q. No. 3: The greatest slogan of naturalism is "Follow Nature".

Ans. to Q. No. 4: Rousseau was the pioneer of the campaign of using naturalistic ideas in the field of education.

Ans. to Q. No. 5: Sir Percy Nunn, the educational philosopher has clearly emphasized that the aims of education should be according to the development of the individuality of the child.

6.9 POSSIBLE QUESTIONS

A) Short Questions (Answer each question in about 150 words)

Q.1: Define Naturalism. What should be the educational principles according to the naturalists?

Q.2: Explain the curriculum that is prescribed on the basis of naturalistic schools of philosophy.

Q.3: Discuss the role of a teacher according to the naturalism.

B) Long Questions (Answer each question in about 300-500 words)

Q.1: Discuss the three fold meaning of nature as introduced by the philosophy of Naturalism.

Q.2: Discuss the essence of Naturalism as a school of philosophy.

Q.3: Discuss the educational implications of naturalism with special reference to metaphysics, epistemology and axiology.

Q.4: Highlight the relevance of naturalism in education in the emerging Indian Society.

7.1 LEARNING OBJECTIVES

After going through this unit, you will be able to–

● discuss the meaning and principles of Pragmatism as a school of philosophy;
● explain the scope of philosophy; and
● identify the educational implications of pragmatism with special references to the scope of philosophy—Metaphysics, Epistemology and Axiology.

7.2 INTRODUCTION

The discussion of philosophy and the relevance of philosophy in education is incomplete if we skip the school of Pragmatism, which is one
of the most significant schools of philosophy. Like the other schools of western philosophy it is one of the major philosophy popularly known in the history of philosophy. This philosophy has wide educational implications. The most important thing about this philosophy is that its contribution to the field of education is warmly welcomed and its practices are undergoing smoothly. Let us discuss this pragmatism as a major school of philosophy.

**7.3 MEANING OF PRAGMATISM**

Pragmatism is basically an American philosophy. It was introduced by American Philosopher. The chief exponents of pragmatism are—William James, John Dewey and S. Kilpatrik.

The word pragmatism has been derived from the Greek words—‘Pragma’ and ‘Pragmatikos’. The Pragma means action/active and efficient. The word Pragmatikos means- Utility or Practicability. Therefore, pragmatism as a school of philosophy is based on action or experimentation and criteria of an action or experimentation is its utility.

Technically, Pragmatism is a philosophy in which activity or experiment is done first and on the basis of its result, idea or principle is formed. Therefore, this philosophy is also known as—‘Experimentalism’.

As a philosophy Pragmatism has a long history. The Pragmatic ideals were found in the writings of Protagoras, an ancient philosopher who said, “Man is the measure of all things.”

William James opined, “Pragmatism is a temper of mind and attitude, it is also a theory of the nature of ideals and truth and finally it is a theory about reality.”

In the words of John Dewey “Values are as unstable as the forms of clouds. They keep on changing from time to time and reality is still in the process of making. Ideals ends are remote by connected with immediate and urgent conditions.”

Thus, Pragmatism as a school of philosophy believes in practical and utilitarian philosophy.
7.3.1 Principles of Pragmatism

The Philosophy of Pragmatism believes in the following fundamental facts–

- **Changing nature of truth**: According to this philosophy, truth, reality, goodness or beauty etc. are all relative terms. These concepts are not predetermined or absolute. They change with the change in person, place, time or circumstances. That is to say truths are many and they are all in the making to reach the ultimate truth. What is true today may not necessarily be true or good to others and so on. Truth is actually that which can be experimented or verified by human activity. Thus, change is an important characteristic of this philosophy.

- **Useful result is the criterion of truth**: If truth is considered fixed and curtained it will hamper the progress of the world according to pragmatism. It is the change that will lead to progress. Progress is after all a value word and values are instrumental.

- **The solution of the problem is the criteria of truth**: Human life is full of problems. Experiments are carried out to solve these problems. The success of these experiments brings us to the point of truth. In short, truth is that which solves the problems of life.

- **Knowledge is the result of action**: Knowledge is something which is sought out in action that is ideas are born out of activities. Man learns various activities that he is engaged in his long path of life.

- **Social rather individual values**: Man is a social being. He is born in a society, lives there and dies in a particular society; so his existence without society is meaningless. Social values and ideals are important instead of individual ones and social values are nothing but democratic values. These values are freedom, equality, tolerance, responsibility and justice.
Philosophical Foundation of Education

Utility of ideas: Reality of an idea or principle lies in its utility or usefulness. Any idea or principle which is useful to us is proper and right, otherwise it is wrong. Thus, this philosophy is very much subjective because an idea or thing which is useful for one may not be useful for others.

Importance of manpower: Man is a very powerful and dominating organism in the universe. By virtue of his power he can change his environment and make it useful and conducive for his development and development for society.

Emphasis on present: This philosophy does not look into the domain of the past. It rather wants to solve present problems on the basis of present experiences. It does not give importance to the experiences of the previous generations. That is why it opposes old customs, traditions and taboos. It believes in the present realities of life and wants to make the people think and act in a realistic way.

Principle of pluralism: Everyone in the society test the truth on the basis of his own way of experimentation. Thus, there comes many truths not one. If truths are many, everyone must be given full freedom to follow one’s own path. Since the world is in the process of reconstruction and development, the nature of reality also changes with the change of time. All these things make the society pluralistic.

Pragmatism as a School of Philosophy Unit 7
Q.2: Mention three most important principles of Pragmatic Philosophy.

7.4 EDUCATIONAL IMPLICATIONS OF PRAGMATISM WITH SPECIAL REFERENCE TO METAPHYSICS, EPISTEMOLOGY AND AXIOLOGY

As a practical and utilitarian school of philosophy, pragmatism has influenced education to the maximum extent. This philosophy does not believe in imparting education for its own sake, rather it is to be imparted with reference to human needs. This Philosophy has so many educational implications. We can present the educational implications of pragmatism in terms of the varied areas of study made of philosophy.

Metaphysics, Epistemology and Axiology are the three important divisions of the philosophy.

- **Metaphysics**: Metaphysics is a part of philosophy which believes in and studies about the existence of God, his nature, existence of soul, existence of life, the knowledge of universe, development of universe, origin and imposition of the creation. According to the area of study, Metaphysics has been divided into five parts— (i) Theology, (ii) Metaphysics regarding Soul, (iii) Science of Universe, (iv) Science of Creation, (v) Cosmology

- **Epistemology**: It is the important part of philosophy that deals with the theory of knowledge. Under this branch human intelligence and problems concerning his capacity for learning like limit of grasping
knowledge about creation, his means, nature of evidence, nature of truth and falsehood and the possibilities of realization of the real by human mind are studied.

- **Axiology:** Another significant part of philosophy which is concerned with the different values, objectives and ideals of human life. Axiology is categorized into three categories or parts—
  - Logic— which gives an understanding of the scientific method of enquiry through the inductive and deductive methods. Logic converse imagination or supposition, methods of enquiry etc.
  - Ethics— this part of axiology studies the conduct of man such as good and bad action, courtesy-discourtesy, good and bad behaviour etc.
  - Aesthetic— another part of Axiology which studies different problems connected with beauty.

These three are the important areas of study by philosophy.

Pragmatism is one of the most important western philosophies. We can discuss the implications of this western philosophy with special reference to these three parts of philosophy.

### 7.4.1 Pragmatism and Aims of Education

Pragmatism does not believe in any pre-determined and fixed aim of life. When aims of life are indeterminate and changeable with the variation of time, place or person, there can never be pre-determined and fixed or general aims of education. According to this Philosophy—

**With reference to Metaphysics:** The aim of education should be—
- The formulation and cultivation of a dynamic, adoptable, resourceful and enterprising mind among the people.

**With reference to Epistemology:**
- Development of original and creative thinking which enables a person to cope successfully with the varied situations of life.
- To direct the impulses, interests and abilities towards the satisfaction of the felt needs of the child in the real environment.
All round development of the individual is also an important aim of education. Education should develop an individual physically, mentally, socially, morally and aesthetically.

**With reference to Axiology:**
- The aims of education advocated by the school of pragmatism are significantly expressed in terms of axiology.
- According to Ross, “The general educational aim of the pragmatist is just the creation of new values.
- For creation of new values the aim of education is to provide physical, intellectual, moral and aesthetic activities as the media for the creation of values.

### 7.4.2 Pragmatism and Curriculum

Pragmatism is not in-favour of fixing curriculum in advance. Only an outline of the activities may be kept in view in the beginning and a curriculum be evolved according to the requirement of the situations.

According to pragmatic philosophy the following subjects should be included in the curriculum—

**With special reference to Metaphysics:** All subjects and activities should be integrated in order to make knowledge one unit. The subjects which are taught after dividing them into units for convenience must be integrated at the end. This follows the principle of integration.

**With special reference to Epistemology:** According to pragmatism, only the subject, activities and experiences should be included in the curriculum which have direct relevance and usefulness to fulfilling the specific needs of children. And it also helps them to real knowledge. The subjects like—Language, Physical Education, Geography, History, Science, Mathematics, Agriculture should be taught.

**With special reference to Axiology:** According to Pragmatic philosopher, students should be given full freedom to their specific interest. Thus it believes that—
- reading, writing, counting, crafts, art and natural sciences should be included.
➢ Purposeful and social activities should be included in the curriculum which makes the children good citizen and men of high moral character.

➢ Vocational and Technical education should be also included to enable the child to earn his living.

........................................................................................................................................
........................................................................................................................................
........................................................................................................................................
........................................................................................................................................
........................................................................................................................................
7.4.3 Pragmatism and Method of Teaching

Pragmatism is not in favour of old and worn out methods of teaching. It believes in experimenting with new methods. Some of the methods of teaching advocated by pragmatic philosophy are as follows:

In tune with Metaphysics:

- **Purposive and progressive teaching:** According to pragmatism, the child must be able to achieve some goals of life through the process of education—self-learning or experiences. Teacher should guide the students to change their activities and experiences accordingly. In this way, process of search from good to better never stops.

- **Problems centered teaching:** Under this method, a number of relevant problems are put before children and teaching is done through these problems. The child is initiated by the teacher to solve these problems through experimentation. Project method of Kilpatrick is very suitable for this.

In tune with Epistemology:

- **Child centered teaching:** Each child is different in intelligence, limits of grasping knowledge and abilities and interest. As a result, no single and fixed method of teaching can be useful to all. The method of teaching should be child centric i.e. in this method the child should be made the centre of all educational activities.

- **Activity centered method:** Instead of emphasizing thought, ideas and rote learning pragmatism believes in experimental or activity—Centered method, which develops creative power of the child which is useful both for children and for the nation.

In tune with Axiology:

- **Real method:** According to this pragmatic philosophy, education should be “Stresses action rather than reflection”. Teacher should put the children in real situation so that he/she may himself solve the problems by using scientific method of enquiry which indicates their logical power.
- **Integrated approach of teaching**: Teacher should teach all the subjects in a correlated and integrated manner to make the knowledge a single unit as well as to make them developed with a good character.

### 7.4.4 Pragmatism and Discipline

The pragmatists believe that powerful and co-operative activities carried on in a free and happy environment are conducive to good discipline. The discipline followed by pragmatic philosopher can be examined in terms of the three parts of philosophy—Metaphysics, Epistemology and Axiology.

**In terms of Metaphysics**: Some such disciplinary activities are followed in pragmatic school of education by performing which the child becomes self-restrained and co-operative and the sense of responsibility to know the world is automatically developed in them.

**In terms of Epistemology**: Children have their own rate of learning abilities. This philosophy believes in “Self-discipline”. It is not imposed on the child by any external authority. On the other hand, the child imposes it upon himself voluntarily. It emphasizes social discipline through participation in co-operative activities in the school society which helps them to earn knowledge from the real experiences.

**In terms of Axiology**: Pragmatism advocates ‘Self-discipline’. Such discipline creates in children virtues like—tolerance, mutual respect, self-control initiative and originality. Participation in the school society enables them to imbibe values like—tolerance, mutual respect, sympathy, initiative and service of humanity.

### 7.4.5 Pragmatism and Role of Teacher

The role of teacher is very important in pragmatic school of education. It is not a dictator here but he is a friend, philosopher and guide in the classroom. The chief function of a pragmatic teacher is to create real life situation in which some problems may emerge and the child be interested in the solution of these problems. Here,
the teacher is simply required to provide opportunity for activity and learning. Thus, the teacher puts his pupils in the position of a discoverer and experimenter.

Thus, the role of teacher followed by pragmatic teacher is characterized by the nature of philosophy. It helps the children to know the world through experimentation helps them to acquire knowledge as well as develop their logical power and socially needed values. Thus, metaphysically, epistemologically and axiological the role of teacher is sound.

Summarizing the teacher’s role following points may be deduced–

- This philosophy does not believe in the traditional method of teaching and lesson making of the teacher.
- It believes in the principle of doing rather than knowing of the child.
- Teacher is to create a situation through which self-activity of the students may be possible to be undertaken by them.
- Teacher is to give instruction in all stages of child learning, but he should not make self-expression in education.
- Teacher should provide opportunity for self-expression of the students through their self-activity.

## 7.5 RELEVANCE OF PRAGMATISM IN EDUCATION IN THE EMERGING SOCIETY

Pragmatism as a philosophy of education cannot be readily acceptable to us. It may be accepted only after careful consideration of its strength and weakness as a philosophy. In this regard our attention may be reasonably drawn to the following points:

**Strength of Pragmatism in Education:**
- Pragmatic philosophy has drawn our attention to the social aspect of education. Consequently, we have been able to make effective realization of the democratic values in education needed at present.
It has popularized the concept of utility and productivity in the present day education. Modern education is more conscious about the economic aspect of productivity. As such pragmatism represents the feeling and attitude of a modern man.

The concept of utility in education has been able to make students more purposive and ambitious of life and education. This conscious state of education has made the students more interested to work and develop the sense of work-culture and work-attitude in society.

This philosophy has popularized the concept of learning-by-doing in modern education. Education has been brought nearer to life and activity of the students by this philosophy.

Pragmatism has discouraged blind imitation of subjective method of learning. In its place it has developed objective and purposive study of knowledge and experience through observation and experiment.

This philosophy has encouraged problem solving ability of the learners. The project method is the practical outcome of this philosophy which aims at development of problem solving ability of the students.

Pragmatic philosophy has developed a reasonable outlook in education, so far as its concept of discipline is concerned. Discipline through collective responsibility may be considered as an effective plan of education today.

**Weakness of Pragmatism in Education:**

- Pragmatism as a philosophy has encouraged more of activity and utility in learning. It has not given due attention to the spontaneous and natural playful spirit needed for child learning. Child is here required to sacrifice his joy and delight for the sake of utility and productivity.

- It makes the child more conscious of utility, practice and economic productivity. Such a plan cannot be considered healthy and effective in education from the child’s point of view. It may certainly deprive him of his natural joy of learning and make him as money earning tools in society.
Pragmatism as a philosophy has not given due attention to the moral, spiritual and aesthetic values of education for the child. In the absence of such values education is bound to be dull, lifeless and one-sided.

In our existing system of education pragmatic principles of utility and practice may not always be practicable. It is also likely to create confusion in our practical working out of the educational methods.

Use of project method as the practical outcome of this philosophy may also appear as an unaccustomed method of our education. As a method it is not capable of covering the whole course of a particular subject.

7.6 LET US SUM UP

- Pragmatism is a major school of Western philosophy which believes in practicability and utility.
- It is an American philosophy. The chief exponents are John Dewey, William James and S. Kilpatrik.
- The main principles of Pragmatic philosophy are—Changing nature of truth, Social Values, Utility of ideas, Importance of man power, emphasis on present, principle of pluralism etc.
- The pragmatic philosophy has contributed a lot in the field of Education.
- The three most important area of studies by philosophy are—Metaphysics which believes in the existence of God, soul; Epistemology which deals with the theory of Knowledge; and Axiology which is concerned with the various human values and ideals.
- The main objectives of education according to pragmatic philosophy are formation and cultivation of dynamic, adoptable and enterprising mind.
- Pragmatic philosophy believes in those subjects through which children can experiment and gain knowledge.
- Pragmatic philosophy also believes in vocational and technical education.
Progressive teaching, problem centered teaching, child centric teaching, activity centered teaching, integrated approach of teaching are some teaching methods advocated by pragmatic philosophy.

The discipline practiced in the pragmatic school of education is self discipline.

In pragmatic school, the teacher is not a dictator, but he is a friend, philosopher and guide in the classroom.

8.1 LEARNING OBJECTIVES

After going through this unit, you will be able to–
● describe the meaning and beliefs of existentialism as a school of philosophy;
● identify the fundamental principles of existentialism; and
● discuss the educational implications of existentialism with special reference to metaphysics, epistemology and axiology.

8.2 INTRODUCTION

While discussing the western philosophies and their educational contributions, it would be unfair if we skip the most important as well as
modern philosophy of the world—Existentialism. Philosophies, what we have discussed far are old in comparison to the modern context. In the modern time to discuss about a modern philosophy, we can take—Existentialism as a base of school of philosophy. It emerged as a philosophy against idealism, naturalism, pragmatism, realism and Marxism. Though it is regarded as a modern philosophy originated after the World Wars, some are of the opinion that it dates back to the time of Socrates. They consider him as the first existentialist because of his statement, “I am and always have been a man to obey nothing in my nature except the reasoning except the reasoning which upon reflection appears to me to be the best.” Even Dr. Radhakrishnan opined that, “Existentialism is a new name for an ancient method.” Let us have a look at this school of philosophy in detail.

8.3 MEANING OF EXISTENTIALISM

Existentialism may be described as a modern and youngest philosophy. This is a post-war philosophy developed out of frustration from war. Generally, it is said that existentialism developed as a result of opposition to the methods of traditional Western philosophy after the Second World War.

The individuality of man was very much negated in the two world wars. During the eighteenth century, intelligence and nature got too much recognition. In order to re-establish the supremacy of man as an individual again, this philosophy came into being. As it is a post war philosophy, it is regarded as a modern twentieth century philosophy.

The main exponents of existentialism are—Soren Kierkegaard—the Danish philosopher, Jean Paul Sartre—the French Writer, Karl Jaspess—the German philosopher, Reinholf Neibuhrr—a leading protestant theologian, Martin Heidegger-Greek philosopher. Today Kierkegaard is regarded as the founder of this philosophy. He protested against the dominance of the industrialized society and institutionalism on individuality. He pointed out “the individual loses his authentic reliability when he is swallowed up by history, by associations, by the public, or by the age in which he lives.”

Etymologically the term “existentialism” has been derived from two German words ‘ex-sister’ meaning “which stands out” or “which emerges”.
Therefore, it is understood as a philosophy that emerges out of the man’s problems in life. It gives utmost importance to the individual and his superiority over everything else in this scientific and technological society. It is a philosophy that tries to understand all the conditions related to his existence and necessary for the betterment of his status.

Contemporary existentialist philosophy views man as participating in a world of things and events, and encountering other men. The meaning of human existence is that it is man’s nature to exist—“to stand out into reality, to participate in being to be present to all that is.”

### 8.3.1 Assumptions of Existentialism

- The centre of existence is man rather than truth, laws, principles or essence. Man is characterized by decisions, will and choice. Although existentialists emphasise man’s place in the world, or man’s relationship to being, or even man’s relationship to God, they still indicate that there is a certain uniqueness and mastery about every human being. The phenomenon of man is life as it is lived, and the mystery is an awareness of man’s deep and complex meaning. Science and rational thinking cannot grasp or explain it.

- This notion of the uniqueness and mystery of man implies that previous definitions of man have been completely unsatisfactory. The uniqueness of man comes from his emotions, feelings, perception and thinking. The philosophy of existentialism stresses meaning: only through development of meaning in his life can man make something of the absurdity which surrounds him. Man is the maker and therefore the master of culture. It is man who imposes a meaning of his universe, although that universe may well function without him. Man cannot be “taught” what the world is about. He must create this for himself.

- Man is not alone in the world. He is connected to other men; he communicates with others; therefore, he cannot live in a state of anarchy. Life is seen as a gift, which, in part is a mystery. Man is
free to choose commitments in life, in his choices, he becomes himself. He is the product of his choices. He is therefore, an individual who is different from other persons. The real living person is more important than any statement we can make about him. Man’s existence is more important than his essence.

- Existentialism propounds the belief that man cannot accept the ready-made concepts of existence forced upon him. He is a free agent capable of shaping his own life and choosing his own destiny. Thus, we cannot treat people as machines, first pulling one lever, then another, and expect predictable results. Therefore, we cannot say that the stimulus-response or conditioning is a sufficient description of man’s behaviour. Man can transcend both himself and his culture.

### 8.3.2 Basic Principles of Existentialism

The philosophy of existentialism is developed on the basis of some fundamental facts. Following are the underlying principles of existentialism—
Philosophical Foundation of Education

Principle of existence: Existentialism believes in existence of individuality. According to existentialists, existence does not mean mere living, but it means to maintain complete, strong, self-conscious, responsible and progressive self.

Principle of supremacy of man: According to this philosophy, man is supreme organism. He should not be exploited in the interest of the society or the nation. Society or political system is a must but society should not give secondary place to man. Society is for man and not vice-versa.

Principle of struggle for existence: This philosophy will never achieve old age i.e. it is not limited to time. According to it, struggle for existence was there when man first evolved and it is continuing even today. Man tries to become victorious at all costs.

Principle of self-realization and self-consciousness: This philosophy believed in the inner and immediate realization of self-consciousness. There is a basic desire for the existence of individuality in man. If this individuality is recognized, his life becomes purposeful, meaningful and easy.

Principle of freedom and individual responsibility: According to this philosophy, individual interest and individual discretions of man are very important. If a man wants to experience a real life, he would recognize freedom. The mechanical and industrial life today has snatched individual freedom from him and therefore he is being deprived of realities of life and individual responsibilities.

Principle of preservation of individuality: The existentialists have attracted the attention of the world towards human weakness and insecurity. According to them, in this scientific age, man is leading a solitary life; surrounded by anxieties, frustration, fear and feeling of guilt. His individuality is being blunted continuously. If it continues such, one day individuality will be lost from the word forever. So for preservation and existence of individuality of man, according to this philosophy,
he should be kept free from all worries, frustration, fear and feeling of guilt.

- **Principles of progressiveness of human life**: According to existentialism, existence does not mean mere living. It rather advocates for complete, strong, self-conscious, responsible and progressive life of man.

### 8.4 Educational Implications of Existentialism with Special Reference to Metaphysics, Epistemology and Axiology

Like the other schools of philosophy, this modern and youngest school of philosophy—existentialism has contributed a lot in the field of education. In the earlier unit, we have explained the three major scope or area of study by philosophy. The three major parts of philosophy as we have discussed earlier are—Metaphysics, Epistemology and Axiology. In reference to all these parts of philosophy we can discuss the educational implications of Existentialism.

#### 8.4.1 Existentialism and Aims of Education

The following are the important aims of education according to existentialism with special reference to **Metaphysics**—

- To educate each and every individual of the society in order to develop his insights and feeling for the development of his inner self.
➢ To acquaint man with his destinations, by giving him understanding of his “Being” and this will ultimately lead him to his heavenly abode.

➢ The existentialist does not imagine a man devoid of circumstances. The objective world around man gives him the realization of “Self”. Therefore, according to existentialism, education must aim at development of the whole man.

➢ Existentialism gives more importance to subjectivity rather than to objectivity. According to them, education should make a man subjective and should make him conscious for his individuality or self.

➢ To give special interest to individuality of man in education is an important objective of existentialism.

Aims of education with special reference to Epistemology—

➢ To provide opportunity for all-round development of personality. Education should develop individuals physically, mentally, emotionally and spiritually.

➢ To provide maximum freedom to the individual to develop his thinking power.

Aims of education with special reference to Axiology—

➢ To develop the ability of perseverance and tolerance in man so that he may live and adjust in the modern world without compromising his individuality and subjectivity.

➢ Education must also develop in the pupils a scale of values consistent with his absolute freedom. The pupils must develop a commitment to these values and act for them.

➢ Development of introspective power should be the main aim of education. It should develop powers like self-observation among the pupils.

➢ To develop the effective side of life, i.e. the emotional and aesthetic side of man rather than the rational and cognitive side of life.
8.4.2 Existentialism and Curriculum

According to this philosophy education should always be child-centric. It should provide full freedom to the child to develop naturally. Therefore, the child must choose his own curriculum related to his needs and which will help him to face the problems in life. However, existentialism emphasizes more on humanities, social sciences, ethics than scientific, and technical knowledge as it believes that the former is more beneficial for the development of individuality. By discarding the objectivity of physical knowledge and experiences, existentialism does not give any importance to objective subjects’—like natural science and mathematics. This philosophy opposes that scientific, industrial and technical environment which does not allow the individuality of man to develop.

Subjects to be included in existentialistic school of education in support with Metaphysics: Theology is one of the most important subjects to be studied in existentialistic school of education.

Natural sciences are also studied but with the spectacles of subjectivity.

Subject to be included in existentialistic school of education in support with Epistemology: According to the existentialists, some subjects should be included in the curriculum which change the thinking of children in such a way that he may evaluate every situation in his own context rather than in the context of others. For this, humanistic and social sciences are given importance.

Subject to be included in existentialistic school of education in support with axiology: According to existentialism, in order to develop subjectivity and inner self, moral science should be included in the curriculum. They believed that by learning science, there is a sort of inner misleading and no peace. Therefore, this philosophy supports the inclusion of the subjects—moral and religious education.

Any subjects in school even extra activities like-aesthetics, music, etc can present existential situation for teaching and the
development of human beings. Again some subjects reflect the meditative awareness of the essential conditions than others. The two most prominent of these are literature and the arts.

### 8.4.3 Existentialism and Methods of Teaching

Existentialists favour the Socratic approach to teaching. They prefer better home education to school education. Methods of teaching must give the pupils maximum freedom to learn according to their own inclinations and must develop creative activity in children. Existentialists favour the method of asking question, refining answers, debating in certain issues till a desirable conclusion is arrived at. They believe that through this method individual knowledge and wisdom is developed. It also helps in developing creative ability in the students. They opposed group methods of teaching. This philosophy has not actually propounded any specific methods of teaching. It simply lays stress on developing the self of the individual in what so ever manner it is possible. The following methods of teaching are used in the existentialistic school of education—

**With special reference to Metaphysics:**

- **Opposition of experimental sciences:** This philosophy takes objective science only as means to reach the end i.e. the subjectivity of knowledge.

**With special reference to Epistemology:**

- **Individualistic teaching:** Existentialism wants to develop the self of each individual separately by teaching which is very much individualistic in nature.

- **Teaching by using reflective thinking:** In order to develop the subjectivity of the individual reflective thinking is very much used. Efforts are made to develop thinking powers of the child and acquaint him with his existence in this method

- **Heuristic method:** This method can be used very easily by those who believe in this philosophy. Individuals discover here his own truth by applying his intellect.
8.4.4 Existentialism and Discipline

The philosophy of existentialism believes that the school should provide an atmosphere where the individuals develop in a healthy way. Children learn better when relieved from intense competitions, harsh discipline and fear from failure. Here the students are given full freedom to develop their self by changing their objective knowledge into subjective one. But these children are trained in such a manner that they do not become selfish, autocratic, or irresponsible due to their subjectivity. They are also given education according to their specific interest and abilities. In this way, **self-evaluation is the beginning and end of the learning process.** Thus, disciplinary process of existentialistic school of education supports metaphysical, epistemological and axiological nature of philosophy as it gives importance to individualistic view of the students and thus it gives the students the power of logical thinking.

8.4.5 Existentialism and Role of Teachers

In existentialistic school of philosophy, teachers are given very much importance. He can facilitate development of originality and creativity by providing a climate as well as basic skill which
make exploration possible. The role of teacher is very flexible. There is a positive relationship between himself and his students.

The teacher is in the foreground and is the centre of attraction. In this school of philosophy, the teacher initiates the act of education through his action and influences the lives of students through his own life. His relationship with his students is not permissive but disciplined. By playing such a role, the teacher makes this philosophy significant in three most important aspects of philosophy—metaphysics, epistemology and axiology. It stresses on personal relationship between the teacher and the students. The teacher must pay individual attention to the students. Instead of imposing his own ideas, ideologies and values on his students, the teacher must encourage them to develop their ideas, thoughts and ideologies so that they can face any challenges in future life. The teacher must be only be a guide and treat his students as free individuals.

### 8.5 MERITS AND DEMERITS OF EXISTENTIALISM

**Merits of Existentialism:**

- The last century and the 21st century have made man so much materialistic and selfish that he was lost in the shine and glory of industrial and material progress. At this juncture, a philosophy of this kind was very much needed.
- Industrial and material world was neglecting the individuality of man completely. He had become only a tool in the hands of science and technology. Existentialism once again recognized the individuality of man and all round development of his personality.
- Man is very much dynamic and progressive. His interest in the objective world is also very much on the increase leaving the religion aside. By emphasizing the limited existence of man, this philosophy brought the man closer to religion again.
- It wants to make a man perfect and subjective. It enables him to realize the suffering of others on the basis of self-realization.
Demerits of Existentialism:

- The ideas of arriving at perfection through subjectivity and introversion are misleading. If one has subjective attitude towards a problem how can his views be accepted by others in today’s objective world.
- Negligence of objectivity and over emphasis on subjectivity make the philosophy a game of arguments only. Because of this reason, this philosophy has not gained popularity so far.
- Existentialism requires a good deal of time and effort on the part of teacher to develop individual relationship with the students for having a closer understanding of their potentialities.
- The educational methods in existentialism appear to be impractical and inapplicable in an industrial society.

8.6 LET US SUM UP

- Existentialism is a post war philosophy as well as it is the youngest philosophy.
- It is said that existentialism is developed as a result of opposition to the methods of traditional western philosophies.
- The chief exponents of this philosophy were— Soren Kierkegaard—the Danish philosopher, Jean Paul Sartre— a French writer, Karl Jaspess— German philosopher, Reinholf Neibuhr— a leading protestant theologian, Martin Heidegger— Greek philosopher
- This philosophy believes in the individuality of man. It opposes industrial age, science and objectivity.
- The fundamental principles of existentialism are— principle of existence, supremacy of man, struggle for existence, self-realization etc.
- Existentialism has contributed a lot in the field of education which are significant in the three important aspects of philosophy— metaphysics, epistemology and axiology.
- The most important objective of education according to existentialism is to educate each and every individual to develop their insight and individuality.
Theology, religious and moral education are the important subjects to be included in curriculum in existentialistic school of education.

The important methods of teaching practiced in existentialistic school of education are– Individualistic method, teaching by reflective thinking and Heuristic method.

Regarding the discipline of existentialistic philosophy, they believed that– self-evaluation is the beginning and end of learning process.

The role of teacher in existentialistic philosophy is very important. He is the foreground and in the centre of attraction.

8.8 ANSWERS TO CHECK YOUR PROGRESS

Ans. to Q. No. 1: Existentialism may be described as a modern and youngest philosophy. This is a post-war philosophy developed out of frustration from war. Generally, it is said that existentialism developed as a result of opposition to the methods of traditional western philosophy after the Second World War.

Ans. to Q. No. 2: This philosophy prefers man to nation, body to intelligence and physical world to nature. It also opposes industrial age, science objectivity etc that have made man a tool in the hands of industrial society and political systems. Existentialism believes that everything should serve man and not vice-versa.
Ans. to Q. No. 3: The three important principles of existentialism are—principle of existence, principle of supremacy of man, principle of struggle for existence.

Ans. to Q. No. 4: Theology, Moral and Religious education are the three important subject advocated by existentialism.

Ans. to Q. No. 5: The three important methods of teaching practiced in existentialistic schools are—Individualistic teaching, Teaching by using reflective thinking, Heuristic method.

8.9 POSSIBLE QUESTIONS

A) Short Questions (Answer each question in about 150 words)
Q.1: What is the basis of Existentialism?
Q.2: Write a brief note on beliefs of Existentialism?
Q.3: Mention the basic principles of Existentialism.
Q.4: What type of discipline is followed in Existentialistic school?
Q.5: Highlight the points of merits of the Existentialism as a school of philosophy.

B) Long Questions (Answer each question in about 300-500 words)
Q.1: Discuss Existentialism as a school of philosophy.
Q.2: Discuss the educational implication of Existentialism on the curriculum with special reference to Axiology.
Q.3: Discuss the educational implications of Existentialism on methods of teaching with special reference to Epistemology.
